Executive Summary

Study Background

Square Port Shipyard Private Limited ('SPSPL' or Company or Client) was incorporated on November 29, 2022, at ROC Kolkata under Companies Act, 2013 limited by shares. However, by a special resolution Company has altered his Memorandum of Association with respect to the place of the Registered Office by changing it from the State of West Bengal to Maharashtra, outside the jurisdiction of ROC Kolkata to ROC Mumbai confirmed by an order of Regional Director bearing the date 02nd July 2025. In line with same, ROC Mumbai has issued a Certificate of Registration for Change of State to Company bearing the date 16th July 2025.

The Company specializes in the construction and repair of commercial and offshore vessels and is heading towards being a pioneering force in the maritime industry, committed to reshaping the seascape through innovation and sustainability. SPSPL aims to engage in a wide range of activities related to manufacturing, operating, and trading in various types of ships and vessels, including transportation services for goods and passengers nationally and internationally. This includes activities such as design, construction, maintenance, and distribution across diverse modalities and specifications.

SPSPL was a fully owned subsidiary of M/s. Square Four Housing & Infrastructure Development Private Limited ('SFHIDPL' or Parent Company), which is a Kolkata based company involved in the real estate and trading line of business. On 02nd January 2024 SFHIDPL has filed applications to NCLT, Mumbai under section of 60(5) of the Insolvency & Bankruptcy Code, 2016 in the Liquidation Process of M/s. Bharti Defence and Infrastructure Limited ('BDIL'), through its wholly owned subsidiary SPSPL. On 07th March 2023 NCLT Mumbai has awarded SPSPL as Successful Bidder and passed directions to Liquidator to transfer and / or convey all the properties and assets of Dabhol Shipyard along with the Sale Certificate to SPSPL. NCLT Mumbai, ordered the Liquidator to transfer all the registration certificates, licenses, approvals, sanctions, permissions etc. presently in the name of BDIL and or its Dabhol Shipyard unit in the name of SPSPL. In line with same, Sale/ Revised Sale Certificates were issued with lists of assets being transferred to SPSPL. The assets comprise of Dabhol Shipyard including land and building, Plant & machinery, inventory, semi-constructed vessel, other movable assets and agreement with Larsen & Toubro Limited in relation to the assets with all rights and interest therein, on a going concern.

The historical growth of Dabhol Shipyard is provided in exhibit below –

Source: SPSPL

Later, on 22nd April 2024, M/s. Hazoor Multi Projects Limited ('HMPL') acquired a full stake in Square Port Shipyard Private Limited. The acquisition was completed by way of a Share Purchase Agreement (SPA) and for cash consideration of Rs.3,91,50,000 (Rupees Three Crore Ninety-One Lakh Fifty Thousand) at a share price of Rs.261 per share. In addition to the equity acquisition, HMPL also took over and assumed the liabilities associated with the Dabhol Shipyard assets acquired under the liquidation process, having an overall acquisition value of Rs. 184.52 crore as per the Sale Certificate dated 17th September 2022 comprising land & building, plant & machinery, inventory, semi-constructed vessels, other movable assets, and the agreement with Larsen & Toubro Ltd. (L&T) in relation to the said assets, along with all rights and interests therein, was acquired on a going-concern basis.

Hazoor Multi Projects Limited was incorporated in 1992. The company is involved in the business of Infrastructure and Real Estate. The company was initially involved in the construction of residential projects. In FY 2021, the company changed its line of business. Currently, it is now primarily involved in infrastructural development business and works as a subcontractor to execute several national highway road projects awarded by government authorities, which include the National Highways Authority of India and Maharashtra State Road Development Corporation Ltd. Apart from this, Hazoor Multi Projects Limited has also started the EPC contracting business. It operates as an EPC (Engineering, Procurement, and Construction) contractor, specializing in highway projects for clients like MSRDC and NHAI, with recent work on projects like the Samruddhi Expressway. The company's main business is as EPC Contractor for the infrastructure sector.

The new management of SPSPL is now proposing an upgradation and expansion of the acquired Dabhol Shipyard through renovation/ upgradation of existing facilities and machineries with installation of new machines for capacity expansion.

In this regard, Company has now approached and appointed Secant Consultants Private Limited ('SCPL') for undertaking the DPR study of the mentioned upgradation and expansion of Dabhol Shipyard unit. The findings/ observations of SCPL have been presented in form of this report.

Project Configuration

Project Cost

The overall Project cost as estimated at Rs. 624.05 Crores for the proposed project and the same has been summarised in the table below –

All Figures in Rs. Crore	
Project Cost	Amount
Land Acquisition cost & Site Development	0.05
Building & Civil Cost	174.11
Plant and Machinery	345.59
Misc. Fixed Assets	-
Total Hard Cost (A)	519.76
Interest During Construction	26.16
Pre-operative Expenses	26.16
Provision for Contingency	51.98
Total (B)	104.29
Total Project Cost**	624.05

Source: SPSPL and SCPL Estimates

Means of Finance

The proposed project of SPSPL is expected to be funded in a debt equity ratio (DER) of 3:1. The means of finance for the project as proposed is presented in the exhibit below –

All Figures in Rs. Crore	
Means of Finance	Amount
Promoter's contribution	123.53
Equity Share Capital/USL	10.00
Unsecured Loans	113.53
Unsecured Loans -WC Margin	
Debt	370.59
- Term Loan	370.59
Capital Subsidy*	129.93
Total	624.05

Source: SPSPL and SCPL Estimates

Source of Equity/ Promoters Contribution

Based on the discussions with the Management of SPSPL, it is understood that the promoter's contribution for the Project will be brought in form of funds infusion to create the infrastructure for the Project. The source of equity/ promoter's contribution will be the internal accruals of the main holding company, and any shortfall will be brought in by the Promoters from own sources of funds.

Term Loan

Considering a term loan of Rs. 370.59 Crores, the Company shall approach Banks / Financial Institutions to cover the debt component required in setting up the proposed project. The broad covenants of the term loan as proposed include –

Description	Details
Amount of Term Loan	Rs. 370.59 Crore
Interest Rate	10.00% per annum
Financial Closure	31 st March 2026
Door to Door Period	12 Years
Construction Period	16 Months from Financial Closure
Commercial Operations Date	30 th June 2027
Post Construction Moratorium Period	9 Months
Total Moratorium	24 Months
First Disbursal Down	March 2026
Last Disbursal Down	June 2027
Repayment Commences	April 2028
Instalments	120 Accelerated Monthly Instalments
Last Instalment	March 2038

Source: SCPL Analysis

Based on the review of the financial analysis undertaken by the Consultants, the following is observed –

1. The return on capital (ROCE) for the project has been estimated at 16.67%, while the internal rate of return (IRR) has been estimated at 36.87%, both being higher than weighted average post tax cost of capital (WACC) at 7.66%, indicating the Project is financially viable.
2. The net present value (NPV) of the project has been estimated at Rs. 1,045.11 Crore, which also indicates that the Project is financially viable.
3. Meanwhile the average DSCR of the Project has been ascertained at 4.18 and minimum DSCR has been ascertained at 2.56, both parameters indicating the project has fair repayment capacity.

Conclusion

The Consultants conclude the following from the techno-economic evaluation undertaken for the Project –

Market Assessment

- The global shipbuilding industry remains a strategically important pillar of maritime trade and defence capability, supporting nearly 90% of world trade that moves by sea.
- As per the industry report it is stated that the global shipbuilding market was valued at USD 150.42 billion in 2024 and is projected to grow steadily at a CAGR of 3.43%, reaching USD 155.58 billion in 2025 and further expanding to USD 203.76 billion by 2033.

- Between 2019 and 2024, global shipbuilding output has ranged between 55 million GT and 72 million GT, indicating both resilience and volatility within the sector.
- Among these, China is the world's largest shipbuilding nation, capturing more than 55.70% of global production and a similarly large share of the global orderbook by tonnage.
- During this period, global shipbuilding output fluctuated between 55 million GT and 72 million GT, reflecting the sector's cyclical nature and sensitivity to global economic conditions. The data clearly shows that China, the Republic of Korea (South Korea), and Japan remain the dominant shipbuilding centres, collectively accounting for over 85–90% of total global production throughout these years.
- As of 2022–23, Cochin Shipyard Limited (CSL) holds the highest shipbuilding capacity in the country at 110 thousand DWT, reflecting its role as the flagship yard of India's maritime manufacturing ecosystem.
- At the end of FY 2023–24, reporting shipyards in India collectively held an orderbook of 410 vessels, representing a cumulative 601.08 thousand DWT.
- During FY 2023–24, Indian shipyards delivered a total of 201 vessels with an aggregate tonnage of 31.97 thousand DWT.
- Public sector shipyards collectively held 168 vessels with a total orderbook of 293.84 thousand DWT.
- Private sector shipyards held 242 vessels with a total DWT of 307.69 thousand tons, slightly higher than public sector yards in tonnage share
- In FY 2023–24, a total of 418 vessels were repaired across reporting shipyards in India. Of these, 227 vessels were repaired by private sector shipyards, while 191 vessels were handled by public sector shipyards.
- India is poised to significantly expand its presence in the global shipbuilding market over the coming decade. The Indian shipbuilding industry, valued at USD 1.12 billion in 2024, is projected to grow at a high pace and reach up to USD 8.12 Billion in 2033 driven by rising domestic requirements, strategic defence programs, port-led development, and policy support.
- The Government of India has introduced several strategic policies, schemes, and fiscal incentives to strengthen the domestic shipbuilding and ship-repair ecosystem and position India as a competitive global maritime manufacturing hub. These initiatives are aligned with the broader vision of *Maritime India Vision (MIV) 2030*, *Sagarmala Programme*, and the goal of increasing India's share in global shipbuilding and repair markets.

Technical Assessment

- Team SCPL understands that Square Port Shipyard has a dedicated land of 182 acres for shipyard operations. Consultants also noticed that most of the facilities are properly located in the dedicated space with good inter-connectivity with each other, however some requires upgradation/ renovation works for efficient operations.
- The total constructed area of the Project boundary as on the date of site visit undertaken by the Consultants stand at 7,28,446 Sq. M.

- The Company is in process of appointing Damen Technical Cooperation B.V, Modern Engineering and Projects Limited, Shoresafe Maritime Consultant Private Limited and other leading Companies/ Consultants/ Advisors etc. for assisting in implementation of the proposed Project.
- The raw material required for manufacturing ship/ boats/ barges/ rigs etc. is a niche segment and there are a limited set of international and domestic player manufacturing this grade of raw material. The Company already has existing relation with these players, for procurement of requisite grade of raw material for the proposed expansion Project. Hence there is no perceived risk in terms of procurement of appropriate raw material for the proposed Project.
- To meet the power requirement, Square Port yard have an existing express feeder connection of 980 KVA procured from Maharashtra State Electricity Distribution Company Limited (MSEDCL). The connection is procured through three 500 KVA substations located in the yard at separate facilities with a backup generator of 1,000 KVA at site.
- To meet the water requirements, Square Port yard have multiple borewells and tanks storage facility at the site. In operations, water is majorly used for cooling and testing purpose.
- Square Port yard has two Sewage Treatment Plants of combined designed capacity 100 CMD for the treatment of 37.4 CMD of sewage. Treated effluent shall be recycled 60% for secondary purposes like Toilet Flushing, floor washing, fire frightening, etc and remaining shall be used on land for gardening within premise after confirming above standards.
- The manpower required for the project is ascertained at 672 personnel for the proposed project.
- Considering the same, the project will be implemented over a period of 15 months from the date of achieving the financial closure, assumed to be 31st March 2026 and hence the Project is expected to achieve the commercial operations by end of June 2028 and commercial operations from July 2038.
- Based on the technical assessment and evaluation as undertaken by the Consultants, the proposed expansion/ renovation/ modernisation/ upgrade/ refurbishment Project of existing shipyard of SPSPL at Dabhol is a technically viable preposition.

Financial Assessment

- The overall project cost for upgrade/ renovation/ modernisation and new installation at SPSPL's Dabhol shipyard has been estimated at Rs. 624.05 Crore, which is proposed to be funded in a debt equity ratio of 3:1, meaning Promoters Contribution of Rs. 123.53 Crores and Term Loan from Lenders to the tune of Rs. 370.59 Crore and considering subsidy receipt of Rs. 124.93 Crore.
- The interest rate on term loan has been considered at 10.00% and the duration for term loan has been considered at 12 years.

- The return on capital (ROCE) for the project has been estimated at 16.67%, while the internal rate of return (IRR) has been estimated at 36.87%, both being higher than weighted average post tax cost of capital (WACC) at 7.66%, indicating the Project is financially viable.
- The net present value (NPV) of the project has been estimated at Rs. 1,045.11 Crore, which also indicates that the Project is financially viable.
- Meanwhile the average DSCR of the Project has been ascertained at 4.18 and minimum DSCR has been ascertained at 2.56, both parameters indicating the project has fair repayment capacity.
- Based on the market assessment, technical evaluation, SWOT analysis, risk analysis and mitigation measure and the financial evaluation as carried out by the Consultants, the proposed expansion/ upgrade/ modernisation/ refurbishment Project of SPSPL is found to be feasible proposition.

Introduction

Study Background

SPSPL has acquired the assets of Dabhol Shipyard including land and building, Plant & machinery, inventory, semi-constructed vessel, other movable assets and agreement with Larsen & Toubro Limited in relation to the assets with all rights and interest therein, on a going concern, through a Liquidation Process carried by NCLT Mumbai. SPSPL was a wholly owned subsidiary of M/s. Square Four Housing & Infrastructure Development Private Limited however on 22nd April 2024, M/s. Hazoor Multi Projects Limited ('HMPL') acquired a full stake in Square Port Shipyard Private Limited. The acquisition was completed by way of a Share Purchase Agreement (SPA) and for cash consideration of Rs.3,91,50,000 (Rupees Three Crore Ninety-One Lakh Fifty Thousand) at a share price of Rs.261 per share.

The new management of SPSPL is now proposing an upgradation and expansion of the acquired Dabhol Shipyard through renovation/ upgradation of existing facilities and machineries with installation of new machines for capacity expansion.

In this regard, Company has now approached and appointed Secant Consultants Private Limited ('SCPL') for undertaking the DPR study of the mentioned upgradation and expansion of Dabhol Shipyard unit. The findings/ observations of SCPL have been presented in form of this report.

Description	Remarks/ Details
Company Name	Square Port Shipyard Private Limited
Constitution	Private Limited
PAN	ABJCS8352E
GSTIN	27ABJCS8352E1Z2
Date of Incorporation	29 th November, 2022
Registered Address	18 Floor-I Plot-209 Atlanta Building, Jamnalal Bajaj Marg, Nariman Point, Mumbai- 400021, Maharashtra, India
Units	Dabhol Shipyard
Industry	Maritime
Board of Directors	• Mr. Radheshyam L Mopalwar • Mr. Arvind Vilasrao Sapkal • Mr. Fatteh Singh Krishnrao Patil • Mr. Santkumar Goyal
Project Cost	Rs. 529.43 Crore
Means of Finance	The project is proposed to be funded in a Debt-Equity Ratio of 3:1 (considering USL from Promoters as part of Equity) 1. Equity – Rs. 10.00 Crore

	2. USL from Promoters – Rs. 122.36 Crore 3. Term Loan from Lenders – Rs. 397.08 Crore
Current Status of Project	The shipyard at Dabhol has been acquired by the new Management and was in possession of the Company at the time of site visit undertaken by the Consultants. The basic clearing of site from previous scrap works has already commenced and partial construction/ renovation works has also commenced at site. The Company has identified Secant Consultants Private Limited to undertake the preparation of Detailed Project Report for the Project and will subsequently approach the Lenders for raising the Term Loan for completion of the Project.

Board of Directors

The brief about the Board of Directors of the Company is provided in the exhibit below –

Director's Name	DIN	Education and Experience
Mr. Radheshyam L Mopalwar	2604676	Shri Radheshyam Mopalwar is a senior IAS officer who retired in 2018. He was reappointed by the Government of Maharashtra as VC&MD of the MSRDC with a view to complete the flagship project of the Government, viz;- Samruddhi Mahamarg, a 701 KM Expressway connecting Nagpur to Mumbai. He was continued in the post for almost 6 years after retirement. He also held the post of Director General of Infrastructure War Room in the Chief Minister's Office of Maharashtra for one year and four months in addition to his duties as VC&MD of MSRDC. He has vast administrative experience behind him and had executed prestigious projects like Gur-ta-Gaddi at Nanded between 2005-09 when he was Collector of the Nanded District. He has been leading projects of Urban Renewal. Executed large projects in, Information Technology, Public Health Engineering and Groundwater Sector as well. He was also instrumental in developing airports. After taking retirement in December 2023, Shri Mopalwar has been recently appointed as Chairman and Managing Director for M/s Hazoor Multi Projects Ltd (HMPL) and has also been appointed as Chairman for Modern Engineering & Projects Limited (MEPL).

Director's Name	DIN	Education and Experience
Mr. Arvind Vilasrao Sapkal	08607096	Mr. Arvind Sapkal has an impressive educational and professional background. He completed his B.Tech in Mechanical Engineering from IIT Mumbai, one of India's premier institutions for technical education. His expertise in engineering and leadership experience is reflected in his significant role at ONGC Videsh Ltd., where he served as the Senior Vice President (Sr. V.P.) and Country Manager for Vietnam.
Mr. Fattesh Singh Krishnrao Patil	10738344	Mr. Fatteshsingh Patil had a distinguished career in law enforcement as an Indian Police Service (IPS) officer. He retired from his position as an Inspector General of Police (IGP), a senior rank in the Indian Police service.
Mr. Santkumar Goyal	02052831	Mr. Santkumar Goyal holds a graduation degree in Commerce and has accumulated extensive knowledge across various industries, with a particular focus on manufacturing. His expertise in commerce has likely provided him with a strong foundation in financial management, business operations, and strategy.

Secant Consultants Private Limited

Secant Consultants Private Limited is a growing multi-dimensional technical, development and management consultancy company with head office at Lucknow and regional office at Mumbai, Noida and Pune.

The Company's mission is to provide high end consulting services to corporate and government (both central and state) bodies by partnering to overcome their existing problems and to assist them on growth trajectory. SCPL combines industry specific managerial expertise along with consulting competence in all its services.

The team of experts at SCPL has a combined business advisory and operational experience of over 150 years. The Team is an optimum mix of Technocrats, Certified Asset Valuers, Market Research Analysts, Financial Analysts, Contract Specialist, Architects, Economists, Growth Strategists and Health Consultants.

SCPL is currently empanelled with State Bank of India (Maharashtra/ Goa Region, Uttar Pradesh Region and Kolkata Region), State Bank of India Project Finance SBU (India Level Empanelment), Union Bank of India (India Level Empanelment) and Bank of India (Indian Level Empanelment). During the 15 years of existence, the team from SCPL has executed over 850 assignments in advisory capacity for projects ranging from Rs. 20 Crores to upto Rs. 1000 Crores.

Scope of Services

The Scope of Services as envisaged by the Consultants has been presented below –

Market Assessment

1. Demand and market
 - a) Structure and characteristics of the ship-building industry in world.
 - b) Approximate present size of demand of ship building industry in global markets.
 - c) Production and installed capacity of the ship building industry in global markets.
 - d) Discuss about the past growth, estimate future growth of ship building industry.
 - e) Commenting on the current, as well as the future demand-supply gap scenario of ship building industry.
 - f) Commenting on the historical price trend and expected future price trend of ship building industry.
 - g) Review and comment on the government policies and initiatives for the sector in India, as the project will be located at Dabhol in India.
 - h) Undertaking competition analysis on qualitative basis and wherever data is available on quantitative basis.
2. Review and comment on the marketing concept, sales forecast and marketing budget
 - a) Description of the marketing concept, selected target markets and strategies for these markets.
 - b) Estimated annual revenues from products, pricing of the product.
 - c) Estimated annual operating cost and expenses towards costs of sales promotion and marketing etc.

Technology Assessment

1. Review and comment on the configuration project as proposed by the Company, taking into consideration the expansions planned by the Company (if any).
2. Review and comment on the shipbuilding production plan, as prepared by the Company for the existing and the future projects.
3. Review the entire process of shipbuilding/ ship repairs/ refurbishment/ retrofit/ upgrade/ modernization as required by the Client for the Ships/ Projects as allocated to the Company.
4. Review and comment on the land purchase/ sales deed and understand the availability of the land for implementation of the Project. Based on the review undertaken, comment on the adequacy of land for implementation of the future expansions.
5. Review and comment on the block project cost as estimated by the Company. This would include the cost of refurbishment/ retrofit/ upgrade/ modernization of the proposed Project. This will include the classification of the block project cost in broad project cost heads including –
 - a) Land and Land Development
 - b) Building and Civil Works Cost
 - c) Plant and Machinery Cost

- d) Miscellaneous Fixed Assets
 - e) Contingency
 - f) Preliminary and Pre-operative Expenses
 - g) Interest During Construction Period
 - h) Margin Money for Working Capital
6. Review and comment on the quotations/ agreement/ contract for upgrade/ refurbishment/ modernization/ extension etc. of the existing Jetty and building and civil works at the site.
 7. Review and comment on the quotations/ agreement/ contract for procurement of plant and machinery and services for the refurbishment/ retrofit/ upgrade/ modernization project.
 8. Review and comments on the existing maintenance contract for the existing unit and understand the extendibility of same to the new refurbishment/ retrofit/ upgrade/ modernization project (in case any). In case there are no longer a valid contracts on this front, then review/ comment on the proposal for the same for the Company for the Project post implementation.
 9. Review the manpower requirement and manpower recruitment policy as proposed by the Company. Understand the organogram as proposed by the Company for operations of the Project post implementation and commenting on the suitability/ adequacy of the same.
 10. Review and comment on the implementation schedule proposed by the Company for the shipbuilding/ refurbishment/ retrofit/ upgrade/ modernization project.
 11. Review and comment on the statutory approvals and clearances required for the shipbuilding/ refurbishment/ retrofit/ upgrade/ modernization Project.
 12. Review and comment on the utilities requirements and infrastructure available at the site for the proposed shipbuilding/ refurbishment/ retrofit/ upgrade/ modernization project.
 13. Review and comments on the environmental impact of proposed shipbuilding/ refurbishment/ retrofit/ upgrade/ modernization Project as proposed by the Company.

Financial Assessment

Based on the data/ information as provided by the Company and various Technical Consultants and Contractors as shortlisted by the Company, undertake an independent financial evaluation/ assessment which would comprise of –

1. Project Financing
 - a. Proposed capital structure and proposed financing
 - b. Cost/ Means of finance

2. Production cost (significantly large cost items to be classified by materials, personnel and overhead costs, as well as by variable/direct and fixed/indirect costs).
3. Financial evaluation based on the above-mentioned estimated values.
4. Commenting on the Viability of the Project, based on -
 - a. Net Present Value
 - b. Internal Rate of Return
 - c. Return on Capital Employed
 - d. Debt Service Coverage Ratio

Risk and SWOT Analysis

1. Based on market, technical and financial assessment, undertake a detailed risk assessment exercise
2. Suggest possible mitigation measures of the risk
3. Undertake SWOT Analysis of the Project

Approach and Methodology

SCPL will adopt a consultative approach during the entire course of the assignment. The team from SCPL will work closely along with the team from Company/ Company's Consultants for successful and early completion of the assignment. All the information required for successful completion of the assignment will be collated by team SCPL from the following sources –

- In house information available with the Consultants
- Information available with the Client Organization
- Published information available with various Government Departments
- Sector/ Industry/ Country reports published by reputed consultancy organizations
- Journals/ Publication of trade association
- Discussions with industry/ sector experts

Based on the secondary and primary analysis the Consultants estimated the facilities planning including service offerings. The Consultants have provided estimates of capital investments required and operating costs based on revenue and cost streams.

Industry Assessment

Introduction – Shipbuilding Industry

The shipbuilding industry is one of the world's most strategically significant and technologically intensive manufacturing sectors. It plays an important role in enabling global trade, defense preparedness, energy transportation, offshore exploration, and maritime connectivity. Nearly 90% of world trade by volume is transported by sea, making shipbuilding fundamental to international economic integration and global supply chain stability. Beyond commerce, shipbuilding underpins national security, offshore energy development, and humanitarian logistics, giving it substantial geopolitical and economic importance.

At its core, shipbuilding involves the design, engineering, fabrication, assembly, and commissioning of a wide spectrum of vessels—ranging from small harbour crafts, barges, tugs and patrol boats to sophisticated merchant vessels, LNG carriers, naval warships, dredgers, offshore support vessels (OSVs), and specialized vessels for deep-water operations.

The industry is capital-intensive, requiring heavy infrastructure such as dry docks, slipways, fabrication shops, cranes, blasting & painting chambers, and integrated material-handling systems. Its production cycles are long, often extending 12 to 36 months, depending on vessel complexity.

Globally, shipbuilding is characterised by high concentration and large-scale economies, with China, South Korea, and Japan dominating more than 80% of global newbuild output. These nations have developed integrated ecosystems of steel suppliers, marine OEMs, classification societies, engineering services, and component manufacturers, enabling rapid and cost-effective production of large commercial vessels. Europe, the U.S., and certain Southeast Asian countries specialise in high-technology or niche vessel segments such as cruise ships, naval vessels, and offshore structures.

The shipbuilding industry is cyclical in nature, heavily influenced by global trade trends, freight rate fluctuations, oil and gas investment cycles, naval procurement programme, and environmental regulations. The industry experiences demand peaks during periods of high trade activity and tanker rates, followed by downturns when global economic conditions weaken. Recent years have seen a rising focus on “green shipping,” driven by IMO regulations on emissions, ballast water management, and energy efficiency. This has created new opportunities for eco-friendly newbuilds, hybrid propulsion vessels, and retrofit/upgrade projects.

Market Size of Global Shipbuilding Industry

The global shipbuilding industry remains a strategically important pillar of maritime trade and defence capability, supporting nearly 90% of world trade that moves by sea.

As per the industry report it is stated that the global shipbuilding market was valued at USD 150.42 billion in 2024 and is projected to grow steadily at a CAGR of 3.43%, reaching USD 155.58 billion in 2025 and further expanding to USD 203.76 billion by 2033. The same is estimates by the consultants and exhibits below:

Source: SCPL Estimates and Industry Reports

Marine transportation continues to serve as the backbone of international trade, and the expansion of global commerce over recent decades has significantly influenced the shipbuilding sector. The opening of new markets, the development of extended supply chains, and the increased movement of goods have all been enabled by maritime transport. With nearly 90% of global goods transported by sea, the dependence of nations on shipping has directly fuelled demand for new vessel construction. The industry remains highly concentrated, with South Korea, Japan, and China collectively accounting for approximately 85% of global shipbuilding output. Cargo ships constitute the largest share of maritime vessels used in trade, and the ongoing growth in import–export volumes continue to strengthen the requirement for newbuild capacity.

Further, the global shipbuilding industry, when assessed in terms of gross tonnage (GT) completed each year, reflects a pattern of cyclical fluctuations influenced by global trade movements, supply-chain disruptions, and varying orderbook realisations across major shipbuilding nations.

Source: UNCTAD and SCPL Estimates

Between 2019 and 2024, global shipbuilding output has ranged between 55 million GT and 72 million GT, indicating both resilience and volatility within the sector. After a significant contraction in 2020 due to the pandemic-induced disruptions, the industry experienced a gradual recovery, followed by another correction in 2022. However, this was subsequently reversed by a strong rebound in 2023 and 2024, with 2024 marking the highest production level of the period at 71.69 million GT.

Market Size of Major Ship Building Countries in The World

The global shipbuilding industry is heavily concentrated in a handful of maritime nations that collectively dominate almost the entire newbuild capacity of the world. Shipbuilding is not evenly distributed across countries; instead, it is shaped by long-established industrial ecosystems, steel availability, skilled labour, large waterfront infrastructure, favourable cost structures, and strong government support. As a result, China, South Korea, and Japan have emerged as the three undisputed global leaders, accounting for nearly 85–90% of global shipbuilding output, measured in gross tonnage (GT) and compensated gross tonnage (CGT). Their dominance is further strengthened by vertically integrated supply chains, advanced marine technologies, and high-capacity shipyards capable of constructing some of the world’s largest commercial vessels, including ULCCs, LNG carriers, and mega container ships.

Source: UNCTAD and SCPL Estimates

Among these, China is the world's largest shipbuilding nation, capturing more than 55.70% of global production and a similarly large share of the global orderbook by tonnage. China's shipbuilding market is estimated to be equivalent to more than half of the global shipbuilding market value, primarily driven by its strong commercial shipbuilding segment, large manufacturing ecosystem, and aggressive capacity expansion. South Korea, holding approximately 28.02 % market share, specializes in high-value vessels such as LNG carriers, LPG carriers, drillships, and high-end tankers, enabling it to command higher revenue per ton compared to other nations. Meanwhile, Japan, with a market share of roughly 12.56 %, continues to focus on technologically sophisticated vessels, leveraging decades of marine engineering expertise. Collectively these three countries hold 96.28% of the total market share.

Beyond the top three, several emerging or specialized shipbuilding nations contribute modest shares. The Philippines has developed a reputation for large hull fabrication and bulk carrier construction, giving it just under 1% of global output. European nations such as Italy, France, Germany, and Finland contribute small shares by tonnage but often build high-complexity cruise ships, naval vessels, and specialty vessels—meaning their revenue per ton is significantly higher than Asian yards. Taiwan and Russia round out the top ten, with limited but specialised shipbuilding capacity.

Further, an analysis of global shipbuilding output in gross tonnage (GT) across major shipbuilding nations between 2019 and 2024.

	in Million GT				
Year	World	China	Republic of Korea	Japan	Rest of the World
2019	65.91	23.07	21.67	16.21	4.96
2020	57.76	23.25	18.17	12.82	3.52
2021	60.78	26.86	19.68	10.72	3.52
2022	55.58	25.89	16.25	9.58	3.86
2023	64.77	32.85	18.31	9.96	3.65
2024	71.69	39.11	20.09	9.00	3.49

Source: UNCTAD and SCPL Estimates

During this period, global shipbuilding output fluctuated between 55 million GT and 72 million GT, reflecting the sector's cyclical nature and sensitivity to global economic conditions. The data clearly shows that China, the Republic of Korea (South Korea), and Japan remain the dominant shipbuilding centres, collectively accounting for over 85–90% of total global production throughout these years. China's output increased substantially from 23.07 million GT in 2019 to 39.11 million GT in 2024, underscoring its accelerating expansion and its position as the world's largest shipbuilding nation. South Korea maintained stable production in the range of 16–21 million GT, reflecting its strong focus on high-value vessels such as LNG carriers and advanced tankers. In contrast, Japan's output shows a gradual decline, moving from 16.21 million GT in 2019 to 9.00 million GT in 2024, indicating a structural shift toward specialised, high-technology vessel segments rather than large-volume production.

On the other hand, the "Rest of the World" category consistently contributes a relatively small share, ranging between 3.49 and 4.96 million GT, highlighting the limited but steady participation of other regions such as Europe, Southeast Asia, and emerging shipbuilding nations. The overall growth from 64.77 million GT in 2023 to 71.69 million GT in 2024 marks the highest production level in the observed period and reflects a strong post-pandemic rebound driven by recovering global demand.

Major Shipbuilding Companies — Key Players

Among the global leaders, Hyundai Heavy Industries (HHI) of South Korea stands out as the largest shipbuilding company in the world, supported by the massive Ulsan yard—globally the largest shipyard—which has delivered more than 2,300 vessels and boasts a production capacity of 9.2 million GT

In China, the sector is led by China State Shipbuilding Corporation (CSSC) and Yangzijiang Shipbuilding, both of which contribute to China's dominant 47% share of global shipbuilding activity. Yangzijiang alone possesses a production capacity of 7 million DWT and maintains one of the world's largest private shipbuilding orderbooks valued at USD 11 billion for 149 vessels.

Japan's leading player is Imabari Shipbuilding, the country's largest shipbuilder, operating 10 shipyards with the nation's largest orderbook (13.6 million DWT). It remains highly diversified across vessel categories and supports Japan's shipbuilding ecosystem through backward integration and vessel-owning operations via Shoei Kisen Kaisha.

Company	Country	No. of Shipyards	Production Capacity	Max Ship Size Delivered	Orderbook / Revenue Highlights
Hyundai Heavy Industries (HHI)	South Korea	1 (Ulsan – world's largest yard)	9.2 Mn GT	1.3 Mn DWT	On November 23, 2025, that it has signed a shipbuilding contract with HMM for eight 13,400-TEU dual-fuel container ships. The total contract value amounts to 1.456 billion USD, comprising LNG carriers, ultra-large container ships, VLCCs, LPG & special vessels. Delivery visibility up to

Company	Country	No. of Shipyards	Production Capacity	Max Ship Size Delivered	Orderbook / Revenue Highlights
					2029–30. Strong margins in LNG & gas carriers.
Yangzijiang Shipbuilding	China	4 (Yangzi, Xinfu, Offshore, Shipbuilding)	7 Mn DWT	400,000 DWT	Singapore-listed Chinese shipyard group Yangzijiang Shipbuilding has received 50 newbuilding orders as of date in 2025. The \$2.17 billion in new orders include 38 container ships, 10 bulk carriers, and two 40,000 cu metre LPG carriers. The group has delivered a total of 46 new buildings in 2025, achieving 82% of its annual target of delivering 56 new ships. Orderbook (Nov-2025): ~245 vessels worth ~USD 22.8 Bn, deliveries extending to 2030. ~70% of backlog in green / dual-fuel vessels (LNG, methanol-ready, ammonia-ready).
Imabari Shipbuilding	Japan	10	Largest orderbook in Japan (~13.6 Mn DWT)	310,000 DWT	Largest private shipbuilder in Japan; diversified vessel segments
China State Shipbuilding Corporation (CSSC)	China	40+ yards & subsidiaries (group level)	World's largest by CGT and deliveries	NA	In 2025, secured mega domestic & export orders, including 87 vessels worth ~USD 7.1 Bn from COSCO alone. Controls a majority share of China's >60% global orderbook dominance.
COSCO Shipping Heavy Industry	China	9 major shipyards	Shipbuilding: ~7.5 Mn tonnes/year; Repair: 1,500+ vessels/year	NA	One of the largest global ship repair networks. Shipbuilding Industry in India

The Indian shipbuilding industry forms a strategic pillar of the country's maritime ecosystem, contributing to national security, trade competitiveness, coastal development, and industrial growth. Although still emerging compared to global shipbuilding leaders such as China, South Korea, and Japan, India has steadily expanded its shipbuilding, ship repair, and maritime manufacturing capabilities over the past two decades. The sector benefits from India's extensive 11,098.81 kilometres coastline, proximity to major global shipping routes, a large technical workforce, and an evolving maritime industrial base that includes steel manufacturing, engineering goods, marine equipment, and port logistics.

According to the Directorate General of Shipping, as of 31st March 2024, India's shipping fleet stood at 13.66 million Gross Tonnage (GT) with a total of 1,521 registered ships. Despite being one of the world's fastest-growing economies with rapidly expanding trade volumes, Indian-flagged vessels carried only 4.11% of the nation's overseas trade during FY 2023–24, indicating a significant dependence on foreign carriers.

The shipbuilding sector in India is currently undergoing a phase of revival driven by multiple policy interventions and strategic demand. Initiatives such as the Maritime India Vision 2030, Sagarmala Programme, Shipbuilding Financial Assistance Policy, and the Make in India mission have created an enabling environment for capital investment, technology adoption, and capacity enhancement. Additionally, rising defence requirements, expanding coastal shipping, growing offshore energy operations, and the global shift toward greener vessels are creating new opportunities for Indian yards. India also has the potential to become a leading global ship repair hub, supported by its geographical advantage near busy shipping lanes in the Indian Ocean and comparatively lower labour costs.

Market Size of Indian Shipbuilding Industry

The Indian shipbuilding industry has witnessed significant expansion over the past three years, with its market size increasing from approximately USD 90 million in 2022 to around USD 1.12 billion in 2024 and is estimated to **reach USD 1.30 billion in 2025**. This rapid growth is being driven by rising coastal and international maritime trade, increasing defence and naval procurement, offshore energy development, and strong policy support under initiatives such as *Make in India*, *Atmanirbhar Bharat*, and the *Shipbuilding Financial Assistance (SFA) Scheme*.

Despite this accelerated growth trajectory, India's share in the global shipbuilding market remains below 1%, highlighting the sector's position as an emerging but high-potential industry. The relatively low global share underscores substantial headroom for capacity expansion, technology upgradation, and increased participation in commercial and specialised vessel segments.

Geographically, the industry is concentrated along India's extensive coastline of over 7,500 km, with established shipbuilding and ship-repair clusters in Maharashtra, Kerala, Goa, Andhra Pradesh, West Bengal, Tamil Nadu, and Gujarat. These clusters host a combination of public sector shipyards (such as Cochin Shipyard Limited and

Mazagon Dock Shipbuilders Limited) and private sector players, catering to a wide spectrum of activities including commercial shipbuilding, defence vessels, offshore and marine structures, and ship repair and maintenance services.

Source: Industry Reports and SCPL Estimates

Geographical Distribution of India's Shipbuilding Industry

India's shipbuilding activities are concentrated across several coastal states, each hosting a mix of major public and private shipyards that collectively shape the country's maritime manufacturing ecosystem.

State	Description
Maharashtra (Mumbai):	Maharashtra hosts some of the oldest and most strategic shipyards in India. Mazagon Dock Shipbuilders Limited (MDL), one of the largest state-run shipyards, is in Mumbai and is known for delivering more than 800 vessels, including submarines, warships, and Coast Guard platforms. Mumbai's Bombay Dockyard, a historic government-run naval facility, further strengthens the region's maritime capabilities. This concentration of facilities makes Maharashtra the strongest and most diversified shipbuilding cluster in India.
Kerala (Kochi):	Kochi is another major centre of Indian shipbuilding activity, led by Cochin Shipyard Limited (CSL)—India's largest shipbuilder and a key government enterprise. CSL specializes in constructing aircraft carriers, offshore vessels, tankers, specialized commercial vessels, and operates the country's largest ship-repair facility with drydock and international repair capabilities. CSL has two important subsidiaries—Hooghly Cochin Shipyard Ltd. and Udupi Cochin Shipyard. The region also hosts private shipyards such as Bristol Boats, Praga Marine Pvt. Ltd., and Sea Blue Shipyard, contributing to Kerala's emerging maritime manufacturing ecosystem.

State	Description
Goa:	Goa has a strong shipbuilding footprint represented by Goa Shipyard Limited (GSL), a state-run yard known for defence patrol vessels, missile boats, and specialized naval platforms. The private sector is well represented by Dempo Shipbuilding & Engineering Pvt. Ltd., which also owns Modest Infrastructure Ltd. Other privately-owned facilities include Mandovi Drydocks, Marine Operating Company Pvt. Ltd., and Timblo Drydocks Pvt. Ltd., making Goa a diversified hub for both commercial shipbuilding and small-vessel construction.
Andhra Pradesh (Visakhapatnam):	Visakhapatnam is home to Hindustan Shipyard Limited (HSL), a major state-owned shipyard with strong capabilities in constructing tankers, bulk carriers, offshore supply vessels, and strategic defence platforms. The city also hosts the Naval Dockyard, a government-run facility engaged in maintenance, refits, and construction support for Indian Navy vessels. This region plays a crucial role in India's defence shipbuilding programs.
West Bengal (Kolkata):	West Bengal features significant public-sector shipbuilding enterprises such as Garden Reach Shipbuilders & Engineers (GRSE), which operates with its subsidiary Rajabagan Dockyard. GRSE is one of India's premier defence shipbuilders and has produced a wide range of naval vessels. The state additionally hosts Shalimar Works (1980) Ltd., another government-owned shipyard, and Titagarh Marine Ltd. (owned by Titagarh Group), which operates from Barrackpore and focuses on inland and coastal vessels.
Tamil Nadu (Chennai):	Chennai is home to Kattupalli Shipyard, operated by L&T Shipbuilding, a major player in defence and high-technology vessel construction. L&T is known for advanced offshore vessels, patrol ships, and warships. The region also hosts Vadyar Boats, a private firm specializing in smaller and customized vessel categories.
Other States (Gujarat, Karnataka, etc.):	Other important shipyards include Chowgule Shipyard Drydock in Ratnagiri, SDIL (formerly Pipavav Shipyard) in Gujarat, San Marine in Kakinada (private), Samudra Shipyard Pvt. Ltd. in Alappuzha, and SHOFT Shipyard in Bharuch. These shipyards expand India's geographic footprint and support offshore, coastal, and small-vessel construction.

Source: SCPL Analysis

Shipbuilding Capacity in India

India's shipbuilding capacity is distributed across a combination of public and private sector shipyards, with capabilities largely concentrated among a few major players. Based on the latest data available for 2025–2026, India is currently undergoing a massive strategic shift in its shipbuilding landscape. While the installed capacities for several yards remain consistent with recent years, the government has launched the Shipbuilding Financial Assistance Policy (SBFAP) and a Rs. 69,725 crore packages to aggressively scale these figures. As of 2024–25, Cochin Shipyard Limited (CSL) remains the leader, with its capacity now increasingly focused on "Green Engineering" and high-value vessels. A significant recent development is the rise of Mazagon Dock Shipbuilders (MDL) and Garden Reach Shipbuilders (GRSE) in the commercial and specialized segments, moving beyond their traditional defence-only roles. Cochin Shipyard Limited (CSL) the highest shipbuilding capacity in the country at 110 thousand DWT, reflecting its role as the flagship yard of India's maritime manufacturing ecosystem. It is followed by Hindustan Shipyard Limited (HSL) with 80 thousand DWT of installed capacity. In the private sector, Shoft Shipyard Pvt. Ltd. and Patra Shipping Pvt. Ltd. each possess capacities of 10 thousand DWT, while San Marine, Mandovi Drydocks Ltd. (MDD), and Waterways Shipyard Pvt. Ltd. (WSPL) each have an installed capacity of 8 thousand DWT. Other medium-sized yards include Chowgule & Co. Ltd. with 6 thousand DWT, Goa Shipyard Ltd. with 4.5 thousand DWT, and Hooghly Cochin Shipyard Ltd. with 3.5 thousand DWT. The data indicates that while India does possess established shipbuilding capabilities, the overall installed capacity remains modest compared with global shipbuilding leaders.

S. No.	Company	Status	Capacity ('000 DWT)	
1	Cochin Shipyard Ltd.	Public	110	Electric tugs, Hydrogen vessels, and IAC-class ships.
2	Hindustan Shipyard Ltd.	Public	80	Fleet Support Ships and major refit operations.
3	Mazagon Dock Shipbuilders	Public	30	Warships, submarines, and now niche merchant ships.
4	Shoft Shipyard Pvt. Ltd.	Private	10	Specialized barges and utility vessels.
5	Patra Shipping Pvt. Ltd.	Private	10	Coastal and inland waterway vessels.
6	Garden Reach (GRSE)	Public	8	Fast Patrol Vessels and hybrid ferries.
8	Swan and Defence Heavy Industries	Public Limited	- The largest dry dock in India (662 x 65 meters), with a capability of building vessels up to 4,00,000 DWT. - A Goliath Crane with a 600T lift capacity and 2 ELL Cranes with 40T lift capacity each. - Wet basin of 340 x 60 meters and an offshore yard measuring 750 x 265 meters. - Seafront of up to 1.2km for afloat repairs and outfitting. - Block construction site spread over 2.5 million sq. ft. - Fabrication capacity of up to 1,44,000 MTPA.	
9	Chowgule - Mangaluru Shipyard	Private	- Area: 200,000 sqm - Side Launch Jetty: 200m - Construction Berths: 200m x 120m - Block Fabrications Sheds – 100T Blocks - Hatchcover Fabrication Workshop, Piping Workshop, Blasting Booths, Painting Booths, Engineering Workshops, Outfitting Jetty	

10	Chowgule -Loutulim Shipyard, Goa	Private	- Area: 42,000 sqm - Slipway: 220m x 20m - Construction Bay 1: 130m x 25m - Construction Bay 2: 90m x 36m - Block Fabrication Sheds – 35T Block
11	L&T's Kattupalli Shipyard, near Chennai,	Public Limited	- Area 1,225-acre mega-shipyard (often associated with adjacent 900-acre+ facilities) - Waterfront: 2200 mtr - Channel Depth: 12 Mtr - Ship lift capacity: 21050 MT, Dimension 200 x 46 mtr - Berths: 4 Wet Berths and 6 Dry Berths - Capable of handling 50,000 MT/annum of modular fabrication.

Shipbuilding Capacity in Public Sector and Private Sector

India's shipbuilding industry comprises a mix of public and private sector shipyards with varying capacities and technical capabilities. At present, the maximum size of vessels that can be constructed in the public sector shipyards is approximately 1,10,000 DWT. However, this capacity is undergoing a significant upgrade, with Cochin Shipyard Limited (CSL) expanding its infrastructure to enable construction of vessels up to 3,00,000 DWT, positioning India to handle very large crude carriers (VLCCs) and other large commercial vessels.

In the private sector, Indian shipyards demonstrate globally comparable capabilities. Reliance Naval Engineering Limited has infrastructure to build vessels up to 4,00,000 DWT, while L&T Shipbuilding at Kattupalli can construct vessels up to 3,00,000 DWT, including technologically complex Large LNG Carriers. In addition, several private shipyards such as Shoft Shipyard Pvt. Ltd., Chowgule & Co. Ltd., Titagarh Wagons Ltd., Vijay Marine Services, Mandovi Dry Docks Ltd., A.C. Roy & Co., and Dempo Shipbuilding & Engineering Pvt. Ltd. are capable of building smaller LNG carriers, dredgers, coastal vessels, and other specialised ships.

 Ship Building Capacity of Public Sector Companies <table border="1"> <thead> <tr> <th>Company</th> <th>Capacity (in '000 DWT)</th> </tr> </thead> <tbody> <tr> <td>CSL</td> <td>110</td> </tr> <tr> <td>HSL</td> <td>80</td> </tr> <tr> <td>GSL</td> <td>4.5</td> </tr> <tr> <td>HCSL</td> <td>4</td> </tr> <tr> <td>UCSL</td> <td>4</td> </tr> </tbody> </table>	Company	Capacity (in '000 DWT)	CSL	110	HSL	80	GSL	4.5	HCSL	4	UCSL	4	 Ship Buiding Capacity of Private Sector Companies <table border="1"> <thead> <tr> <th>Company</th> <th>Capacity (in '000 DWT)</th> </tr> </thead> <tbody> <tr> <td>SSPL</td> <td>10</td> </tr> <tr> <td>PSPL</td> <td>10</td> </tr> <tr> <td>San Marine</td> <td>10</td> </tr> <tr> <td>MDD</td> <td>8</td> </tr> <tr> <td>WSPL</td> <td>8</td> </tr> <tr> <td>CCPL</td> <td>6</td> </tr> </tbody> </table>	Company	Capacity (in '000 DWT)	SSPL	10	PSPL	10	San Marine	10	MDD	8	WSPL	8	CCPL	6

Among public sector companies, Cochin Shipyard Limited (CSL) possesses the largest shipbuilding capacity in the country at 110,000 DWT, making it India's flagship shipyard. It is followed by Hindustan Shipyard Limited (HSL) with a capacity of 80,000 DWT, reflecting its strong role in commercial and	The private sector displays a more fragmented but competitive landscape. Shoft Shipyard Pvt. Ltd. (SSPL) and Patra Shipping Pvt. Ltd. (PSPL) have the highest capacities, each at 10,000 DWT. These are followed by San Marine (8,000 DWT), Mandovi Drydocks Ltd. (8,000 DWT) and Waterways Shipyard																										

defence vessel construction. Other public yards have significantly smaller capacities, including Goa Shipyard Ltd. (4,500 DWT), Hooghly Cochin Shipyard Ltd. (4,000 DWT) and Udupi Cochin Shipyard Ltd. (4,000 DWT). The above chart indicates a high concentration of capacity, with CSL and HSL together accounting for over 90% of total public sector shipbuilding capability. The remaining yards serve niche vessel categories such as small crafts, inland vessels, and specialized boats.	Pvt. Ltd. (WSPL) (8,000 DWT). Chowgule & Co. Ltd. (C&CL) has a capacity of 6,000 DWT, making it the smallest among the reported private-sector shipyards. Private shipyards generally focus on smaller vessels such as coastal cargo ships, tugs, fishing vessels, patrol boats, and specialized crafts. Their capacities indicate strong regional presence but limited heavy-shipbuilding capability compared with the public sector.
---	--

Source: Ministry of Ports, Shipping and Waterways *2024.

Despite prevailing challenges and a relatively subdued global market, the Indian shipbuilding industry is expected to witness accelerated growth driven by the “Atmanirbhar Bharat” initiative under the Make in India Programme. The Government of India, through the Ministry of Ports, Shipping and Waterways (MoPS&W), has introduced multiple support measures to stimulate domestic shipbuilding demand. One such initiative includes granting preference to locally built tugs for deployment across all Major Ports, thereby ensuring assured domestic demand for Indian shipyards.

Additional growth is expected from policy thrusts aimed at promoting coastal shipping and inland water transport, which require a steady supply of specialised vessels. The defence sector represents another high-potential growth segment. As per published projections, the Indian Navy plans to expand its fleet strength from the current 137 vessels to approximately 200 vessels by 2027. This expansion aligns with the Government’s Defence Production Policy, which envisions positioning India among the top five global aerospace and defence manufacturing nations, with strong participation from both public and private sectors, while achieving self-reliance and catering to export demand from friendly foreign nations.

Emerging opportunities are also visible in urban water transport and short sea shipping, where environment-friendly electric and hybrid propulsion technologies are gaining traction. Recognising the long-term potential in this segment, several private shipyards are actively upgrading their technological and infrastructure capabilities to undertake construction of electric and hybrid vessels, with policy and financial support from the Government.

Note : New company (At S. No. 35) have been added from 2023-24; based on the list obtained from Indian Register of Shipping.

Shipbuilding Orderbook Status (2023–24)*	Ships Delivered (2023–24)*
At the end of FY 2023–24, reporting shipyards in India collectively held an orderbook of 410 vessels,	During FY 2023–24, Indian shipyards delivered a total of 201 vessels with an aggregate tonnage of 31.97

Shipbuilding Orderbook Status (2023–24)*	Ships Delivered (2023–24)*
representing a cumulative 601.08 thousand DWT. Public sector yards accounted for 168 vessels with 293.84 thousand DWT, representing 48.89% of total tonnage on order. Private sector yards held 242 vessels with 307.24 thousand DWT, contributing 51.11% of the orderbook tonnage. The near-equal distribution between the public and private sectors highlights the strengthening presence of private shipyards in India's maritime manufacturing landscape, particularly for small and mid-sized vessels such as tugs, patrol boats, passenger ferries, dredgers, and offshore support vessels.	thousand DWT. Public sector shipyards delivered 32 vessels amounting to 2.71 thousand DWT, while private sector shipyards delivered 169 vessels with a cumulative 29.27 thousand DWT. The significantly higher number of deliveries from private yards reflects their focus on smaller tonnage vessels and the faster turnaround typical of private manufacturing facilities. Public yards, on the other hand, remain predominantly engaged in complex defence shipbuilding projects, which require longer build cycles and higher technical specifications.

Domestic and Export Order

As per the ship orderbook of Indian shipyards highlights the structure of demand in the domestic and export markets and demonstrates the distribution of shipbuilding activity across public and private sector shipyards.

Public Sector Orderbook

Public sector shipyards collectively held 168 vessels with a total orderbook of 293.84 thousand DWT. Of these:

Domestic Orders (Public Sector)	Export Orders (Public Sector)
139 ships 191.04 thousand DWT Domestic demand dominates the public sector orderbook, accounting for 82.7% of total vessels and 65% of total DWT.	29 ships 102.80 thousand DWT Export shipbuilding accounts for 17.3% of vessels but a higher share of DWT due to fewer but larger vessels built for international clients.
Key contributors include: Hindustan Shipyard Ltd. (HSL) – 96 vessels (150.37 thousand DWT), the largest contributor in DWT. Cochin Shipyard Ltd. (CSL) – 33 vessels (22.27 thousand DWT).	Key contributors: CSL – 13 ships (74.64 thousand DWT) Udupi Cochin Shipyard Ltd. (UCSL) – 6 ships (22.80 thousand DWT)

Domestic Orders (Public Sector)	Export Orders (Public Sector)
Garden Reach Shipbuilders & Engineers (GRSE) – 21 vessels (3.26 thousand DWT).	

Source: Ministry of Ports, Shipping and Waterways.

Private Sector Orderbook

Private sector shipyards held 242 vessels with a total DWT of 307.69 thousand tons, slightly higher than public sector yards in tonnage share.

Domestic Orders (Private Sector)	Export Orders (Private Sector)
214 ships 39.33 thousand DWT The private sector predominantly receives domestic orders that are smaller in tonnage.	28 ships 268.35 thousand DWT Despite fewer vessels, export orders form 87% of total DWT for private yards, indicating a focus on higher-value vessels for global clients.
Key contributors: A.H. Wadia Boat Builders – 110 ships (low DWT, small crafts) A.C. Roy & Co. Ltd. – 43 ships Mandovi Dry Docks – 5 ships (9.67 thousand DWT) Marine Care 'N' Associates – 1 ship (8.80 thousand DWT)	Key contributor: Chowgule & Co. Pvt. Ltd. – 23 export ships with 262.73 thousand DWT, making it the single largest contributor to India's export shipbuilding.

Ship-Repairing Capacity in India

India's current annual ship repair market is estimated at approximately INR 2,000 crore, with an overall assessed potential of nearly INR 6,000 crore. However, more than 30% of commercial ship repair work associated with Indian trade is currently undertaken outside the country, resulting in significant revenue leakage.

Over the next decade, India has the potential to develop a ship repair market exceeding INR 14,000 crore, provided the industry is effectively indigenised. The country benefits from a large, skilled, and cost-competitive workforce suitable for the labour-intensive nature of ship repair operations. Nevertheless, the industry's growth is constrained by several factors, including strong competition from international repair hubs located on major trade routes, capability gaps in handling certain specialised vessels, high financing costs, limited availability of ship spares domestically, inadequate ancillary support, and technology-related inefficiencies that prolong repair cycle times.

India's ship-repairing capabilities play a critical role in supporting the maritime economy and attracting foreign vessels operating in the Indian Ocean region. As of 2023–24, Cochin Shipyard Limited leads the repair segment with a capacity of 125 thousand DWT, followed by Hindustan Shipyard Limited with 80 thousand DWT. Among private yards, Patra Shipping Pvt. Ltd. has a capacity of 10 thousand DWT, Waterways Shipyard Pvt. Ltd. has 8 thousand DWT, and San Marine has 7.80 thousand DWT. Other players include Modest Infrastructure Pvt. Ltd. with 6 thousand DWT and Mandovi Drydocks with 5 thousand DWT, while Goa Shipyard Ltd. maintains a repair capacity of 4.5 thousand DWT. These figures highlight that India's repair capacity is more widely distributed than its shipbuilding capacity, with multiple medium-sized facilities able to cater to coastal and regional repair demands.

Top 5 Companies		
S. No.	Company	Capacity ('000 DWT)
1	Cochin Shipyard Ltd.	125
2	Hindustan Shipyard Ltd.	80
3	Patra Shipping Pvt. Ltd.	10
4	Waterways Shipyard Pvt. Ltd.	8
5	Modest Infrastructure Pvt. Ltd.	6

Source: Source: Ministry of Ports, Shipping and Waterways.

In FY 2023–24, a total of 418 vessels were repaired across reporting shipyards in India. Of these, 227 vessels were repaired by private sector shipyards, while 191 vessels were handled by public sector shipyards. The private sector's larger share in repair activity highlights India's growing competitiveness in this segment, supported by faster repair cycles, lower costs, and the strategic location of repair facilities along major coastal trade routes.

Shipbuilding Repairing in Public Sector and Private Sector

Despite its potential, India's ship repair industry remains concentrated, with only 5–6 shipyards out of approximately 53 operational shipyards undertaking significant repair activities. The primary reasons include intense competition from established repair hubs such as Singapore, Dubai, Bahrain, and Colombo, which are strategically located along major international trade routes and offer faster turnaround times.

A major deterrent impacting the competitiveness of Indian ship repair yards is the Goods and Services Tax (GST), which increases overall repair costs compared to foreign yards where such taxes are absent or minimal. Additional cost disadvantages arise from high financing costs, inadequate availability of ship spares within the country, and technology limitations that extend execution timelines.

The public sector forms the backbone of India's ship-repairing industry, with large-scale infrastructure capable of handling high-tonnage commercial and defence vessels. As of 31st March 2024, Cochin Shipyard Limited (CSL) stands as the country's largest and most advanced repair facility, possessing a substantial capacity of 125,000 DWT. CSL's expansive dry-docking and refit capabilities position it as India's premier hub for major overhauls, naval upgrades, offshore repairs, and complex vessel maintenance. Hindustan Shipyard Limited (HSL) follows with a repair capacity of 80,000 DWT, supporting both commercial fleets and strategic defence platforms, including submarines and offshore support vessels. In addition, Goa Shipyard Limited (GSL) and Hooghly Cochin Shipyard Limited (HCSL) contribute to the ecosystem with capacities of 4,500 DWT and 4,000 DWT respectively, primarily focused on smaller naval craft, patrol vessels, and coastal fleet repairs. Together, public-sector shipyards dominate the heavy-repair segment, ensuring India's capability to service large ocean-going ships and meet critical defence maintenance requirements.	India's private-sector ship-repairing segment complements the public sector by catering to medium and small vessel categories, offering faster turnaround times and regionally distributed facilities. Among the reporting private yards, Patra Shipyard Pvt. Ltd. (PSPL) leads the sector with a repair capacity of 10,000 DWT, providing services for coastal vessels, tugs, offshore support vessels, and barges. Waterways Shipyard Pvt. Ltd. (WSPL) and San Marine follow with capacities of 8,000 DWT and 7,800 DWT, respectively, both specializing in the repair of offshore marine assets, coastal cargo vessels, and support craft. Modest Infrastructure Pvt. Ltd. (MIPL), with a capacity of 6,000 DWT, further strengthens the segment by serving small commercial vessels and specialized workboats. The private sector, though smaller in individual capacity compared to PSU yards, plays an essential role in supporting India's maritime economy by expanding repair reach, offering competitive pricing, and addressing the high-frequency repair needs of coastal and inland fleets.

Number of Ships Repaired in India

The ship-repair sector in India has shown consistent activity over the period 2020–21 to 2023–24, reflecting the increasing reliance on domestic repair facilities by both commercial and government fleets. In the year 2023–24, a total of 418 ships were repaired across public and private shipyards. Of these, the private sector repaired 227 ships, accounting for 54.3% of the total repairs, while the public sector repaired 191 ships, contributing the remaining 45.7%. This distribution highlights the growing significance of private shipyards in meeting the operational repair requirements of both coastal and international vessels.

Source: Ministry of Ports, Shipping and Waterways

A year-wise comparison shows steady activity in the repair ecosystem. In 2020–21, the total number of ships repaired was 376, which increased to 319 ships in 2021–22 and reached 489 ships in 2022–23. Although 2023–24 saw a decrease from the exceptionally high repair count of the previous year, the overall volume remains robust, with private yards consistently maintaining a higher share of total repairs. The steady performance of private sector yards can be attributed to faster turnaround times, specialized facilities for small and mid-sized vessels, and competitive costing structures.

Within the public sector, Cochin Shipyard Limited (CSL) emerged as the leading entity in 2023–24, repairing 119 ships and generating earnings of Rs. 975.01 crore. CSL's large dry-dock capacity and comprehensive repair infrastructure have made it the preferred destination for major refit and overhaul requirements. Goa Shipyard Limited (GSL) repaired 38 ships, earning approximately Rs. 145.37 crore, while Garden Reach Shipbuilders & Engineers Ltd. (GRSE) repaired 11 ships worth Rs. 7.481 crore, reflecting their growing engagement in maintenance of naval and auxiliary vessels.

In the private sector, Chidambaram Shipcare Pvt. Ltd. recorded the highest number of repairs with 30 ships, although with modest earnings of Rs. 5.09 crore, indicating its focus on small and mid-sized vessels. Chowgule Lavgan Shipcare Pvt. Ltd. followed with 40 ships repaired, generating revenue of Rs. 167.08 crore, reflecting engagements in higher-value repair contracts. Dempo Shipbuilding & Engineering Pvt. Ltd. repaired 16 ships with earnings of Rs. 5.60 crore, while Sea Blue Shipyard Ltd. handled 16 ships with earnings of Rs. 17.12 crore. Sadhav Offshore Engineering Pvt. Ltd., with repairs of 13 ships earning Rs. 61.65 crore demonstrated strong capabilities in offshore and specialized vessel repairs.

Future Outlook

India is poised to significantly expand its presence in the global shipbuilding market over the coming decade. The Indian shipbuilding industry, valued at USD 1.12 billion in 2024, is projected to grow at a high pace and reach up to USD 8.12 Billion in 2033 driven by rising domestic requirements, strategic defence programs, port-led development, and policy support. India's shipping tonnage remains low—13.66 million GT with Indian-flagged vessels carrying only 4.11% of India's overseas trade. As India continues to expand its integration with global markets, the country will require substantial additions to its shipping fleet to reduce dependence on foreign carriers. This will directly translate into increased demand for domestically built vessels.

Source: Industry Reports and SCPL Estimates

Government initiatives such as Sagarmala, Maritime India Vision 2030, and the Shipbuilding Financial Assistance Policy will further support capacity expansion, modernization of existing yards, and creation of new shipbuilding facilities. The inland waterways development program and the push for coastal shipping will boost demand for barges, ferries, harbour crafts, patrol vessels, and small cargo ships. Defence shipbuilding will remain a strong pillar, with major orders for next-generation warships, submarines, patrol vessels, and support platforms over the next 10–15 years.

In addition to shipbuilding, the ship-repair sector in India is expected to witness exponential growth, supported by:

- India's proximity to busy global shipping lanes
- Lower repair costs compared to Singapore and Dubai
- Expansion of drydock capacity in Kochi, Goa, Mumbai, and Kandla
- Growth in offshore activities and coastal trade

India has the potential to become a leading repair and refit hub in the Indian Ocean Region (IOR), capturing a significant share of vessels that currently divert to Southeast Asia and the Middle East for repairs.

Government Scheme and Initiatives

The Government of India has in recent years moved decisively to revive and scale the domestic shipbuilding and ship-repair ecosystem through a combination of direct financial assistance, policy incentives, capital/credit funds, port-cluster development, and demand-side interventions. Key instruments today include the Shipbuilding Financial Assistance Policy (SBFAP / FAS) (guidelines and grants to Indian shipyards), the Maritime India Vision 2030 / Sagarmala platform for port-led industrialisation, and large new financing vehicles such as the Maritime Development Fund and expanded shipbuilding support announced in recent budgets.

1. Shipbuilding Financial Assistance Policy (SBFAP) (As per circular released on 26th December 2025)

The SBFAP is the flagship scheme designed to make Indian shipyards globally competitive by reducing cost disadvantages.

Key Features

- **Financial Support**
 - 15% assistance for vessels below Rs. 100 crores
 - Upto Rs. 100 Crore 15% assistance is provided, additional 20% assistance is provided to the value above Rs. 100 Crore
 - Upto Rs. 100 Crore 15% assistance is provided, additional 25% assistance for green, hybrid, or specialized vessels
- **Domestic Value Addition Requirement**

Upto 30% not assistance is provided, for above 30%

Pro rata basis e.g.

$(39/40) * 100 = 97.5\%$ rounded up to 98%

$(30/40) * 100 = 75\%$

The decimal point will be rounded up to the nearest whole number.
- **Ship-Breaking Credit Note**
 - Credit equivalent to 40% of scrap value when a ship is scrapped at an Indian yard.
 - Credit redeemable against the cost of building a new vessel.
 - Notes are stackable, transferable, and valid for 3 years.
- **National Shipbuilding Mission**
 - Coordinates funding, approvals, demand aggregation, and international partnerships.
 - 10-year implementation period.

2. Maritime Development Fund (MDF)

The MDF aims to increase EXIM and coastal shipping capacity by improving access to long-term, low-cost finance.

Components**(a) Maritime Investment Fund – Rs. 20,000 crores**

- Supports investments in:
 - Shipyards and ship repair facilities
 - Port infrastructure
 - Fleet expansion
 - Inland & coastal water transport
- **Blended Finance Model**
 - 49% capital at concessional rate from Government
 - 51% commercial financing (multilateral agencies, sovereign funds, port authorities)

(b) Interest Incentivization Fund – Rs. 5,000 crores

- Interest subvention of up to 3% on loans to shipyards.
- Incentive valid up to March 2036.

3. Shipbuilding Development Scheme (SbDS)

Aimed at building world-class shipbuilding clusters and boosting ship repair competitiveness.

Components

- **Capital Support for Shipbuilding Clusters**
 - Greenfield clusters: Rs. 9,930 crores
 - Brownfield expansion: Rs. 8,261 crores
- **Risk Coverage Fund – Rs. 1,443 crores**
Covers insurance and financial risks for shipbuilders.
- **Skill & Capability Development – Rs. 305 crores**
- Duration: 10 years (till 2036)

4. Policy and Legal Reforms**(a) Infrastructure Status for Large Ships**

- Granted in September 2025.
- Allows access to long-term, low-interest financing like roads, airports, railways.

(b) Demand Aggregation

- Oil & Gas PSUs to procure 110+ vessels over the next decade from Indian shipyards.
- Ensures predictable order flow for shipyards and repair units.

(c) Updated Maritime Legislation

To modernize laws and strengthen safety/regulation:

- Bills of Lading Act, 2025
- Carriage of Goods by Sea Act, 2025
- Coastal Shipping Act, 2025
- Merchant Shipping Act, 2025
- Indian Ports Act, 2025

5. Make in India & Procurement Support

- Right of First Refusal (RoFR) for Indian-built, Indian-flagged, and Indian-owned vessels in government tenders.
- Public sector and government procurements below Rs. 200 crores are reserved for Indian shipyards.
- Incentives for green vessels under Harit Nauka Guidelines and Green Tug Transition Programme (GTTP).
- Standardized tugboat designs created to boost indigenous manufacturing.

6. MoUs & Strategic Partnerships

Government is promoting collaboration between public, private, and international players for shipbuilding and repair facilities.

Major Initiatives

- SCI + Oil PSUs JV to build and operate Indian-owned fleets.
- MoUs to create shipbuilding clusters (ports + coastal states + MSMEs + R&D).
- Cochin Shipyard + HD Korea partnership to build large commercial vessels in India.
- Rs. 15,000 crore mega shipyard planned in Tamil Nadu with 1 million GT capacity.
- Sagarmala Finance Corporation partnerships for green finance and fleet modernization.

7. Ship Repair Sector Support

Though ship repair is not governed by a single dedicated scheme, the following initiatives directly boost repair capacity:

Key Ship Repair Support Measures

- Creation of ship repair clusters under Shipbuilding Development Scheme.
- Maritime Development Fund financing for:
 - Dry docks
 - Repair facilities
 - Fabrication units
 - Upgradation of existing yards

- Interest subvention (up to 3%) on loans for ship repair infrastructure.
- Cochin Shipyard's new dry dock + Rs. 3,700 crore fabrication facility to expand repair capacity for large commercial ships.

8. Environmental & Innovation Initiatives

- Harit Nauka: Promotes green technologies for inland vessels.
- Green Tug Transition Programme: Phases out diesel tugs at major ports.
- Incentives for green, hybrid, LNG, methanol-based vessels under SBFAP.
- Creation of R&D hubs within shipbuilding clusters.

Conclusion

Through large-scale investments, forward-looking policies, and global partnerships, the Government of India has created a strong foundation for the revival of the shipbuilding and ship repair industry. The combined impact of financial support, procurement priority, infrastructure development, and legal reforms is expected to generate:

- Higher domestic shipbuilding capacity
- World-class ship repair hubs
- Reduced reliance on foreign vessels
- More maritime employment
- Lower logistics cost
- Stronger EXIM competitiveness

India is now positioned to become a global maritime powerhouse under Maritime India Vision 2030 and Viksit Bharat 2047.

Conclusion

- The global shipbuilding industry remains a strategically important pillar of maritime trade and defence capability, supporting nearly 90% of world trade that moves by sea.
- As per the industry report it is stated that the global shipbuilding market was valued at USD 150.42 billion in 2024 and is projected to grow steadily at a CAGR of 3.43%, reaching USD 155.58 billion in 2025 and further expanding to USD 203.76 billion by 2033.
- Between 2019 and 2024, global shipbuilding output has ranged between 55 million GT and 72 million GT, indicating both resilience and volatility within the sector.
- Among these, China is the world's largest shipbuilding nation, capturing more than 55.70% of global production and a similarly large share of the global orderbook by tonnage.
- During this period, global shipbuilding output fluctuated between 55 million GT and 72 million GT, reflecting the sector's cyclical nature and sensitivity to global economic conditions. The data clearly shows that China, the Republic of Korea (South Korea), and Japan remain the dominant shipbuilding centres, collectively accounting for over 85–90% of total global production throughout these years.

- As of 2022–23, Cochin Shipyard Limited (CSL) holds the highest shipbuilding capacity in the country at 110 thousand DWT, reflecting its role as the flagship yard of India’s maritime manufacturing ecosystem.
- At the end of FY 2023–24, reporting shipyards in India collectively held an orderbook of 410 vessels, representing a cumulative 601.08 thousand DWT.
- During FY 2023–24, Indian shipyards delivered a total of 201 vessels with an aggregate tonnage of 31.97 thousand DWT.
- Public sector shipyards collectively held 168 vessels with a total orderbook of 293.84 thousand DWT.
- Private sector shipyards held 242 vessels with a total DWT of 307.69 thousand tons, slightly higher than public sector yards in tonnage share
- In FY 2024-25, a total of 444 vessels were repaired across reporting shipyards in India. Of these, 247 vessels were repaired by private sector shipyards, while 197 vessels were handled by public sector shipyards.
- India is poised to significantly expand its presence in the global shipbuilding market over the coming decade. The Indian shipbuilding industry, valued at USD 1.12 billion in 2024, is projected to grow at a high pace and reach up to USD 8.12 Billion in 2033 driven by rising domestic requirements, strategic defence programs, port-led development, and policy support.
- The Government of India has introduced several strategic policies, schemes, and fiscal incentives to strengthen the domestic shipbuilding and ship-repair ecosystem and position India as a competitive global maritime manufacturing hub. These initiatives are aligned with the broader vision of *Maritime India Vision (MIV) 2030*, *Sagarmala Programme*, and the goal of increasing India’s share in global shipbuilding and repair markets.

Business Model Assessment

SWOT Analysis

Strengths

- Well experienced leadership team with each senior personnel having over 30–40+ years in shipbuilding, ship operations, offshore engineering, oil & gas, EPC, and defence sectors.
- The company has acquired the unit through the NCLT process, allowing it to gain existing infrastructure at a significantly lower capital cost.
- Strategic location at Dabhol Seaport with direct access to west-coast shipping routes.
- Strong potential for diversified services: shipbuilding, ship repair, hull-block fabrication, heavy engineering, offshore services and defence contracts
- Supportive government policies and incentives boosting shipbuilding and repair sector growth.
- Based on review of the financials of the Group, it is understood that the financial standing of the Group is decent enough to infuse the desired equity/ USL for the Project.
- The Management of the Company is a fair mix of experience and youth.

Weakness

- Inherited infrastructure may need modernization and significant upgrades, which is being mitigated by the proposed Project.
- Initial limitations in large-scale shipbuilding and specialized fabrication, which is being mitigated by the proposed Project, which involved lengthening of the jetty and shipyard to cater to manufacturing of longer/ larger-scale ships.
- Early-stage dependency on establishing new supply-chain and vendor networks.

Opportunities

- Rising demand for ship building, ship repair, coastal vessels, offshore supply vessels, defence and coast guard vessels and inland waterway crafts.
- Government push through Maritime India Vision 2030, Make-in-India, Sagarmala, Inland Waterways expansion.
- The west coast faces a clear shortage of dry-dock capacity, which increases the demand for fast-turnaround ship repair services.
- Opportunities in offshore rig repair, fabrication, and maintenance.
- Export potential for hull blocks, fabricated components, and fast-turnaround repair for foreign vessels.

Threats

- Competition from established shipyards in India as well as abroad.
- Fluctuations in global shipping demand, steel prices, and offshore oil & gas cycles.
- Regulatory delays, environmental compliance, and marine approvals risks.
- International competition from Middle East and SE Asian repair hubs offering lower costs.
- Skilled manpower shortage due to migration of marine labor to Gulf countries.

Business Plan

Product and Service Offering

The proposed shipyard at Dabhol Seaport will position itself as a full-spectrum maritime engineering facility focused primarily on ship building, ship repair, defence and coast guard vessels, supported by hull block fabrication, heavy engineering works, offshore rig services, and selective small-to-medium shipbuilding for high-demand segments. Ship repair—both major and minor—will be the anchor service, targeting dredgers, tugs, general cargo vessels, ferries, barges, inland water transport vessels, offshore supply vessels and river-sea crafts, all of which show strong and recurring market demand in India. In parallel, the yard will develop capabilities in hull-block fabrication, producing modular steel blocks for tankers, container ships, and cruise vessels as an outsourced service to larger domestic and international shipyards.

Yard building and repair capabilities

With existing capabilities SPS can generate ~₹150 Cr in topline in its first year

Capabilities before drydock and slipway	Phase 1	Landing Crafts	General Cargo Carriers/Bulk Carriers	Jack up Rigs	Tugs	Offshore Service Vessels (OSVs)	Deck Cargo Barges
Length of the Ship Up to 150 Meters	Average Price Per Vessel	Ramp-equipped craft for trucks and heavy equipment	Transport packaged, unpackaged and palletised goods and bulk commodities	Self-elevating platforms for offshore drilling, well servicing, and workovers	Tow or push ships, barges, and floating structures	Logistics and support for offshore oil-and-gas platforms, drilling rigs, and offshore wind farms	Transport heavy modules, machinery, and oversized project cargo units
		5 Million USD	20 Million USD	-	10 Million USD	18 Million USD	8 Million USD
Deadweight of the Ship Up to 20,000 MT	Phase 2	Other Small Transport Vessels	Tanker	Passenger Vessels/Ferries	Dredgers	Yachts	Container Vessels
		Vessels that operate near the shore	Move liquid bulk such as crude oil, petroleum products, or chemicals	Move passengers across coastal and deep-sea routes	Excavate and remove seabed sediments and debris	Pleasure and leisure cruising	Carry standard ISO containers between ports
		-	20 Million USD	-	-	-	27 Million USD

Operationally ready shipyard with extensive fixed asset base

 Water front provides secure berthing space, ensuring smooth movement and operational continuity in yard.		 Helipad enables swift access for senior officials, supporting oversight and high-level engagement.
 Jetty & Quays enable seamless vessel docking, streamlining shipbuilding and repair operations.		 NDT Lab ensures rigorous material testing and quality control, supporting safe and reliable shipbuilding.
 Ship Erection Site enables parallel vessel construction, boosting efficiency and accelerating project delivery.		 Accommodation facilities ensure workforce well-being, enabling higher productivity and smoother operations.
 Fabrication Facility enables uninterrupted heavy module assembly, enhancing output quality and production speed.		 Main & Emergency Power setup ensures uninterrupted operations across all critical shipyard activities.
 Cutting & Bending systems ensure precision fabrication, better build quality and expediting production.		 Steel Yard ensures organized material storage and handling, supporting uninterrupted fabrication and assembly workflows.
 Plate Treatment ensures optimal steel preparation, enhancing material flow and build quality from the outset.		 Warehouse facilities support storage, dock block preparation, and ship interior works, streamlining operations.
 Machine Shop enables precise component fabrication, ensuring tight tolerances and faster turnaround times.		 Push Pull Unit enables synced movement of massive structures, improving hull positioning and block integration.
 Fleet of Heavy-duty Cranes enables safe, efficient handling of large modules, accelerating vessel assembly and logistics.		 Material Handling systems ensure smooth movement of heavy modules, streamlining process workflows.

Heavy engineering fabrication will extend the product line further through the manufacture of structural components, decks, outfitting modules, and high-strength assemblies required in shipbuilding and offshore

operations. Over time, the yard will also undertake construction of select small and medium vessels where investment requirements are moderate and market demand is stable. Additionally, offshore rig support services—covering repair, maintenance, and modification of drilling rigs and support platforms—will be integrated as part of the yard’s long-term development strategy.

Operational Facilities From Jetties To Fabrication Shops Equip the Yard for Rapid Shipbuilding, Repair & Future Expansion

Ship Construction Site	Fabrication Shop	Painting & Blasting Shop	Loadout Mechanism	Accommodation
- Sufficiently large jetty (160 meters) with potential to be expanded to 235 meters. - Draft of 5.5 meters. - Stable concrete berth with capstans in place.	- Two fabrication units measuring 2 lakh sq. ft. and 35,000 sq. ft. 70 m x 50 m x 8 m with 4 gantry cranes of 10 T + 10 T capacity. - Successfully fabricated the hull blocks of the first offshore rig launched in India. - Potential site for installation of solar panels.	- A 60 m x 30 m x 30 m dedicated facility for blasting and painting jobs. - Cutting-edge technology available for well-finished vessels.	- Two transporters (SPMP) with capacities of 1800 T and 150 MT. - Push-pull unit of 11,000 T.	- Housing for over 2,500 workers, including recreational facilities, playgrounds, galleries, and other amenities. - Dedicated accommodation for 250 officers, equipped with recreational facilities such as a volleyball court, gym, table tennis, and other leisure provisions.
 	  	 	 	 

Place / Target Market

Strategically located at Dabhol Seaport, near the Mumbai maritime cluster, the shipyard will benefit from proximity to one of India’s busiest shipping corridors and a large concentration of coastal, offshore, and port-linked vessel movements. The target market will include domestic ship operators across coastal cargo, offshore logistics, inland waterway services, port authorities, dredging companies, PSU fleets, and private vessel owners operating from Mumbai, Jawaharlal Nehru Port, Ratnagiri, Goa, and Gujarat. The yard will also cater to international vessels transiting the West Coast shipping lanes, particularly those requiring emergency repair, quick refit or lay-up services. Dabhol’s advantageous geographic positioning—situated close to major trade routes yet free from congestion—provides a natural competitive edge for attracting repair demand from vessels seeking minimal deviation. The regional industrial ecosystem of Maharashtra further enhances accessibility to suppliers, logistics providers, skilled workforce, and technical partners essential for sustained operations.

Pricing

The pricing strategy will focus on maintaining cost competitiveness while ensuring strong financial feasibility. Ship repair services will follow a flexible pricing model—based on job scope, vessel size, repair complexity, materials required, and turnaround time—allowing the yard to remain competitive compared with other repair hubs along the west coast such as Mumbai, Goa, and Gujarat. Hull-block and heavy engineering fabrication will be priced using a cost-plus approach, ensuring margins while remaining attractive to shipyards outsourcing block manufacturing. Offshore rig services will adopt a value-based pricing structure owing to higher technical complexity and the relatively lower number of competing facilities along the Indian coastline. For small-to-medium shipbuilding, pricing will be aligned with government policies such as the Shipbuilding Financial Assistance Scheme, ensuring competitiveness when bidding for private as well as public sector contracts.

Overall, the focus will be on delivering high-quality services at competitive costs, supported by efficient workflows, modern equipment, and optimized resource utilisation.

Track record of shipbuilding and ship repair activities

Promotion/ Distribution

Promotion of the shipyard's services will be carried out through a mix of industry networking, strategic partnerships, digital visibility, and direct engagement with shipowners and the Brokers. Relationship-based marketing will be central, supported by outreach to shipping companies, offshore operators, port authorities, and marine logistics firms active on the west coast. Participation in maritime trade fairs, ship-owner conferences, and industry associations will strengthen brand visibility. The yard will also leverage digital platforms, technical brochures, and service catalogues to showcase capabilities in repair, fabrication, and modular construction. Tie-ups with classification societies, marine insurers, tug operators, and port administration will facilitate faster onboarding of vessels and streamline service initiation. For distribution, service delivery will occur directly at the shipyard, with efficient docking systems, repair berths, and fabrication zones enabling smooth operational flow. Emergency repair response and short-stay services will provide additional pull for domestic and foreign vessels seeking quick turnaround solutions.

Risk Analysis and Mitigation Measures

The risk analysis and mitigation measures for the Project have been presented in the exhibit below –

Parameter	Carrier of Risk	Remark
Experience and Capability Risk	SPSPL	The Consultants note that the Promoters of the Company have appointed experience professional from the shipbuilding, ship-repairing, defence and coast guard vessels, off-shore services and marine industry to take care of day to day operations of the Company.

Parameter	Carrier of Risk	Remark
		Further, the Management of the Company will be recruiting more senior and middle management professionals from the industry to oversee the operations of the Company during the course of implementation of the Project. Hence, experience and capability related risk is not envisaged for the Project.
Funding Risk	SPSPL	The Consultants note that the Company has acquired the existing shipyard for a total considerations of Rs. 184.52 Crore (combination of equity and takeover of debt) from Bharti Defence and Infrastructure Limited, following the due process through NCLT. Now the proposed expansion, upgrade, modernisation and refurbishment project by SPSPL is estimated to have total outlay of Rs. 624.05 Crore, which is proposed to be funded in a DER of 3:1. This means the project is proposed to be funded by Promoters Contribution of Rs. 123.53 Crore and Term Loan from Lenders to the tune of Rs. 370.59 Crore and capital subsidy of Rs. 129.93 Crore. As on the date of release of this DPR, the Company is yet to achieve financial closure and hence funding risk is associated with the Project, till the financial closure is achieved. Once the financial closure is achieved, the funding risk associated with the Project will reduce to minimal level.
Cost Overrun Risk	SPSPL	It is noted that under the current circumstance, the Project is in planning stages and the Company is involved in securing the quotations from various vendors of building and civil works and plant and machinery. The current capex working as considered as part of project cost is based on the best estimates of the senior management team from SPSPL (based on their past experience) and the select quotation as received from some of the vendors. Hence there is a cost overrun related risk associated with the Project. To take care of this cost overrun risk, the Consultants have considered a contingency of 5% on the hardware cost to take care of any escalation in the commodity prices like

Parameter	Carrier of Risk	Remark
		cement and steel during the course of implementation of the Project. Further, in case of any cost overrun, despite the contingency, then the overrun is proposed to be funded by the Group from its own sources of funds.
Time Overrun Risk	SPSPL	The Consultants note that the SPSPL's shipyard at Dabhol is existing facility and capable of manufacturing/ assembling smaller and medium size ships/ boats. The same is expected to continue, during the course of implementation of the Project and hence the Profit and Loss Account of the Company will be active, while the Project will be implemented. Hence effectively there will be no time overrun. Still in case of time overrun during implementation of the proposed expansion/ upgrade/ modernisation/ renovation/ refurbishment project, the overrun is proposed to funded by the Group from its own sources of funds.
Statutory Approvals Risk	SPSPL	As discussed above, the shipyard is already operational and hence all the necessary approvals and clearances for implementation of the Project are already in place. However, the approvals and clearances pertaining to the operations of the facility need to be updated/ renewed from time to time. The Consultants had sought the copies of latest renewed/updated copies of operating approvals and clearances from the Company, however the same were not available till the time of completion of this report. Hence Lenders are requested to take a note of the same and considered a suitable clause in this regard in the sanction letter.
Technology Risk	SPSPL	The Consultants note that the ship-building process is an established technology and there are multiple shipyards, existing and operational across the globe and in India. Further, it should be noted that the Management of SPSPL has approached reputed international Project Management Consulting Firms to assist the Company in planning and overseeing the implementation of the proposed expansion/

Parameter	Carrier of Risk	Remark
		upgrade/ modernisation/ renovation/ refurbishment project and the process of finalising these Consulting Firms is in final stages and is expected to be finalised prior to sanction of the term loan. Hence technology risk associated with the Project is minimal in nature.
Demand/ Market Risk	SPSPL	The Consultants have undertaken a detailed market assessment, both secondary and primary to understand the demand of services and facilities as provided by the Company and based on the same, it is understood that there is a growing demand for the services and facilities as proposed to be offered by the Company. Hence the demand/ market risk as associated with the Project is minimal.
Pricing Risk	SPSPL	The Consultants note that the Company proposes to follow the combination of “Mark to Market” and “Market Penetration Pricing”, so as gain market quicker. The same has been considered by the Consultants while undertaking the financial evaluation while preparing the Detailed Project Report for the proposed expansion/ upgrade/ modernisation/ renovation/ refurbishment project. Hence pricing related risk associated with the Project is deemed to be minimal.
Force Majeure	SPSPL / Insurer	Lenders may ask the Company to purchase adequate insurance cover to mitigate these risks.

Technical Assessment

Project Configuration

The project configuration as envisaged by the Company is presented in the exhibit below –

Source: SPSPL

Land Details

As mentioned earlier, Company has acquired the assets of Dabhol Shipyard through the Liquidation Process carried by NCLT Mumbai. Based on the 2nd Addendum to the Sale Certificate issued by the Liquidator to SPSPL the details of the industrial land transferred to SPSPL is provided in the Annexure Part of the Report –

Details of Owned Land (Part A):

Sr. No	Name of the Village	Gat No./ Hissa No.	Area in hectares	Area in sq. m.

Source: 2nd Addendum of Sale Certificate

Also, with respect to above mentioned land, SPSPL has signed a Novation Agreement to Lease Deed dated 12th December, 2011 is made and executed at Mumbai on 29th July, 2024 with Maharashtra Maritime Board ('MMB'). In the novation agreement the Lessee is changed from Bharati Defence and Infrastructure Limited to Square Port Shipyard Private Limited based on the NCLT, Mumbai Resolution and Sale Certificate issue by Liquidator. The lease period for the land is 30 years with an annual rent of Rs. 96,22,254.

SCPL Observations

Based on the site visit assessment, Team SCPL understands that Square Port Shipyard has a dedicated land of 182 acres for shipyard operations. Consultants also noticed that most of the facilities are properly located in the dedicated space with good inter-connectivity with each other, however some requires upgradation/ renovation works for efficient operations. The efficient interconnectivity offers hassle free flow of raw materials, vehicles and manpower. Also, the shipyard has more than 200 m berthing space, which is quite commendable for private shipyards as a bigger berthing space gives more flexibility to yard operators on operations of large vessels.

Project Location

Source: Google Earth

The distance of the project site from various key demand centres has been provided in table below –

Demand Centre	Distance
Nearest Village	Usgaon (0.97km)
Nearest City	Chiplun (32.54 km)
Nearest Road	Internal Village Road (0 km)
Nearest Highway	State Highway-4 (2.34 km)
Nearest Railway Station	Khed Railway Station (31.34 km)
Nearest Airport	Mumbai Airport (174.32 km)

Source: Site Visit Report

Location Advantages

- *Serviceability to Jawahar Lal Nehru Port Authority JNPA port traffic* - JNPA accounts for 40% of India's total port traffic. The location of Square Port Shipyard is around 100 nautical miles from JNPA Port. Pipavav and ABG shipyard, the next closest shipyards, are around 150 and 200 nautical miles from JNPA port respectively.
- *Serviceability to Goa port traffic* - The distance between Square Port Shipyard, Dabhol and Mormugao port is around 160 nautical miles however, 4 other shipyards (Chowgule, Mandovi, Dempo, Goa Shipyards) are also located in the vicinity with shipbuilding and repair capabilities.
- With the upcoming inland waterway NW-28 Dabhol Creek for cargo transportation, the shipyard's location is bet to service demand for the inland traffic in the region

Facility Layout

Building Area Statement

Based on the above layout, the area statement of major facilities in the yard is shown in exhibit below –

Building/ Unit	Area (Sq.M.)
Open Fabrication Area	11,275
Plate Bending Shed	201
Blasting Painting Shed 1	201
Auto Blast Plant	342
Bonded Area – 3	12,945
Accropode 1,2,3	25,804
Maintenance Shed	2,296
Unit Assembly Area	25,625
Blasting Painting Shed 2	51,654
CNC Machining	1,252
Helipad	676
Panel Line	4,673
Bonded Area – 1	718
Concrete Jetty Area	21,845
Soil Area – Workstation	32,982
Others – Accommodation, Assembly, Admin, Roads Open, Stores, etc.	5,35,957
Total Area of the plant	7,28,446

Shipyard Functions

In the maritime industry, the term “yard” refers to a facility or area where ships are constructed, repaired, and maintained. Also known as a shipyard or dockyard, a yard serves as a hub for various activities related to shipbuilding, ship repair, and shipbreaking.

Shipbuilding yards are specialized facilities where new vessels are constructed from scratch. These yards typically have large dry docks or basins where the hulls of ships are assembled, along with workshops for the fabrication and installation of ship components. Skilled workers such as welders, carpenters, and engineers collaborate to bring the ship’s design to life. Shipbuilding yards are often equipped with heavy machinery, cranes, and gantries to handle the construction process efficiently.

Ship repair yards, on the other hand, focus on maintaining and upgrading existing vessels. These yards provide essential services such as hull repairs, mechanical and electrical work, painting, and retrofitting. Ships undergo regular inspections, maintenance, and necessary repairs to ensure their seaworthiness and compliance with regulations. Ship repair yards are equipped with dry docks, floating docks, and specialized equipment to facilitate the safe and efficient repair process.

Yards are vital components of maritime infrastructure, providing employment opportunities and contributing to the local economy. They play a significant role in the growth and development of the maritime industry by supporting shipbuilding, repair, and recycling activities. The efficiency, capacity, and capabilities of yards directly influence the productivity and competitiveness of a region’s maritime sector.

In the Square Port Shipyard, Company will undertake following services –

Key Services

 Ship Building	 Ship Repairs	 Ship Conversion	 RIG & Offshore Services	 Heavy Engineering Fabrication
Specialize in constructing a wide range of vessels, including merchant ships, defence vessels, and oil rigs, meeting the diverse needs of the maritime industry.	Providing comprehensive repair services for merchant ships, defence vessels, and oil rigs to maintain operational efficiency and readiness.	Executing complex conversion projects, such as transforming crude tankers into FSO/FPSO units and adapting MODUs and PSVs for new roles and functions.	Delivering construction, repair, and maintenance services for offshore rigs, supporting oil, gas, and energy sector operations.	Offering advanced fabrication services, producing specialized components and structures for a wide range of maritime and offshore applications.

Source: SP SPL

Shipbuilding Process

Ships can be put into two main classifications, i.e. warships and commercial ships. Types of commercial ships are passenger vessels, freighters, tankers, colliers, ore carriers, tugs and trawlers. Ships differ in the following characteristics according to the uses for which they are intended i.e. of cargo (oil, bulk, containers, General Cargo, Reefer Cargo), Deadweight, Speed, Range (how far the vessel can travel without bunkering), Flag (Country of Registration), level of Sophistication (Class Notation), number of crew, whether Ice Class etc. These factors would determine the size of the vessel and type of steel, bulk materials like paint/piping, equipment and instrumentation. The general terms used in ship industry are shown in exhibit below –

Source: SCPL Research

The forward end of the ship is called bow, the after end is the stern and halfway between the two is amidships. The beam of the ship is the distance from side to side at its widest point. The depth is the distance between the keel and the main deck amidships. The draft is the distance from the bottom of the ship to the water surface. A line from the bow of the ship to the centre of stern is called centreline. Looking toward the forward end, the part of the ship on the left of centreline is called the port side and, on the right, the starboard side.

A ship is moved by its propellers rotating beneath the water. These propellers are located at the after end of the ship and are connected to propeller shafts to the engines which supply the power for rotating them. The action of the propeller upon the water produces a pushing effect or thrust thus giving ship motion.

The hull or body of the ship includes the outer skin or shell and all the members and parts which hold this shell together, divide it into compartments and give it strength and rigidity. Most hulls, today, are made of steel and are held together and made tight with welding.

The types of vessels used in maritime industry are categorized in exhibit below –

Source: SCPL Research

Shipbuilding Materials

Plates and Profiles – are used more frequently than any other form of steel. Plates are flat rolled steel of uniform thickness. They are used for shell, decks, bulkheads, trunks, coamings etc. Profiles most used in shipbuilding are equal and unequal angles channels, bulb Plates, T-bars and I-beams. The entire hull (excluding castings and forgings) is constructed of plates and profiles

Forgings – are formed from red hot steel by means of hammering or pressing and are used where great strength is required. Crankshafts, propeller shaft and rudder stocks are forged.

Castings - are formed of molten steel poured into molds. Stern frames, stems, propeller struts, hawse pipes and various small fittings of intricate form are usually cast.

Plates and Shapes – are used more frequently than any other form of steel. Plates are flat rolled steel of uniform thickness. They are used for shell, decks, bulkheads, trunks, coamings etc. Shapes most used in shipbuilding are angle bars, channels, bulb angles, T-bars and I-beams. The entire hull (excluding castings and forgings) is constructed of shapes and plates assembled in a large variety of forms.

Source: SCPL Research

Aluminum Alloy

Aluminum Alloy is used where weight is a big constraint. Sometimes, entire vessel may be made out of Aluminum and at times only the superstructure or accommodation is made out of Aluminum which has lower density; however, it has a considerably lower yield strength.

Structural Members

The shell plating is the outer skin of the ship and is made up of a great many plates of steel welded together. Each horizontal row of plating is termed a strake. Strakes are usually lettered A-B-C-D etc. beginning with the row next to the keel. This strake is called the garboard strake and the top strake the sheer strake. The two essentials of the shell are water tightness and strength.

Source: SCPL Research

The flat keel of a ship is the row plates at the bottom of the ship extending from the bow to the stern along the centerline. Decks, corresponding to the floors of a house, are flat sections of steel plates. The deck constructed between three to four feet above the shell at the bottom is called inner bottom or tank top because between these two sections of steel plates are tanks used for carrying water ballast etc or they can simply remain void spaces. The transverse vertical plates dividing these tanks into sections are termed floors. The longitudinal T-structure running along the length is called girders, the central one being centre girder and ones on the sides are called side girders; Girders are fitted either on Deck, Bottom shell, Tank tops

Bulkheads are larger partitions made of plates welded together and stiffened with angle bars, tee bars etc. They divide the ship into compartments along the length or along the breadth, such bulkheads being called either longitudinal or transverse bulkhead and they may run across two or more decks.

The stem is fastened to the forward end of the keel by a stem foot casting and extends up to the top of the hull at the bow. The frames, which are the ribs of the ship, serve to give the ship its form and at the same time support and stiffen the shell plating the frames are transverse members, on the side shell which are connected to floors at the bottom or deck beams/transverses.

Decks are supported by transverses and longitudinal members called beams and girders.

Brackets are small pieces of steel, sometimes flanged, used as connections and strengthening pieces. Foundations are the supports on which all machinery like turbines, condensers, boilers etc. is set. Very little equipment is set directly on the decks.

Key Hull Construction Stages:

1. **Design & Planning:** Concept, basic, and detailed design, dividing the ship into buildable blocks.
2. **Fabrication** of Sub-assembly/Assembly/Blocks: Marking, cutting (often CNC), and bending steel plates and sections.

- **Sub-Assembly:** Assembling basic parts (plates, frames, stiffeners) into units (e.g., panels).
 - **Block Assembly:** Joining units into large, pre-outfitted blocks (piping, wiring) in covered workshops. Modern Shipbuilding demands concept of pre-outfitting to be introduced in the shipbuilding process.
3. **Outfitting and Pre-outfitting:**
 4. **Block Erection:** Transporting blocks to the building dock/slipway and joining them to form the main hull structure.
 5. **Hull Outfitting, Piping and Pre-outfitting:** Hull outfitting, pipi
 6. **Hull Completion & Launching:** All blocks joined, balance hull outfitting, machinery outfitting, hull tested, then launched into water (dry dock flooding, side launch).
 7. **Outfitting (Quay Phase):** balance of outfitting during post launch

Design and Planning:

Design has three phases viz. Basic Design, Production Drawings and As-built Drawings. Some details of these processes are stated below:

- a) **Basic Design:** Based on the Technical Specification key drawings are made following calculations and several iterations. Hull form, structural strength, stability, speed, range are all established. All system drawings. Paint scheme, Engine power, Electrical load, parameters of all outfit items and machineries including propulsion train, Anchors, Fire Fighting Appliances, Life Saving Appliances, Navigation aids and communication devices, details of accommodation, launching calculations etc are prepared incorporating parameters of equipment and instrumentation. These calculations and drawings are approved by a Classification Society - third party technical experts who approve the design and construction and also the statutory compliances of Flag, the National Authority.
- b) **Production Drawings:** With Basic Design as inputs, Production Design House produces Drawings in a pre-determined software to create drawings which clearly represents how a ship can be constructed. The details include Hull Drawings, cutting plans and nesting plans which can be directly fed into CNC Machine, Outfit drawings, system drawings, piping drawings, machinery layouts, electrical cable drawings, accommodation layouts including details of masonry work, carpentry, upholstery, doors and windows and so on. These drawings are prepared in line with the yard facilities, layout and processes adopted by the yard.
Shipyards which adopt concept of Pre-outfitting requisitions for 3-D model at early stage. The concept is explained later in this document.
- c) **As-Built Drawings:** Once the vessel has been built, any changes to the original approved plans are captured and changes to drawings are made, approved and documented.
- d) **Planning and Scheduling:** Shipbuilding is a multi-faceted process and there are interfaces amongst several systems which are handled by different departments. Thus, one of the key aspects of Construction and delivery of the vessel is a detailed plan encompassing Design, Procurement, Fabrication and Erection, Outfitting, completion of pre-launch activities including hydro-test and air-testing, installation of all equipment, Launching, on-board test, pre-commissioning, Sea Trials and Delivery. All the aspects of construction undergoes thorough scrutiny through Quality Control based on a QAP (Quality Assurance Plan) The Schedule is made using a Software either Microsoft Project or Primavera P6. A detailed plan ensures minimum re-work and timely delivery.

2. Fabrication of Blocks: The process starts with priming of plates and then cutting as stated below:**Steel Plates and Profiles Treatment:**

- a) Plates and profiles (sections like Angles, Bulb Plates, T-bars, Channels) are generally received in black form and the first stage of requires the plates to be auto-blasted and primed with a coat of primer. This prevents the plate to corrode or rust during the phases of construction. Shipyard uses a standard paint scheme for priming.
 - b) Cutting: Plates are cut using CNC Cutting Machine using data from a software provided by the production Designer. Nesting (arrangement to cut plates in such a way the wastage is minimum) plan is also provided by the Design firm who does production design.
 - c) Bending of plates: Some of the plates of ship's hull need to be shaped with 2-D or 3-D forms. Such bending is achieved by bending machine with the support of a wooden template for accuracy.
 - d) Fabrication of sub-assemblies and Assemblies; The plates cut by CNC machine and bend plates/profiles are fitted with steel profiles, generally called stiffeners to form sub-assemblies. These sub-assemblies are joined to form a bigger component of hull called assemblies. Assemblies may have some piping and tanks in built within them. The assemblies then are joined to form a complete block which may cover entire width of the vessel or half width of the vessel and shall have within it components of bottom shell, tank top, side shell, decks, bulkheads, tanks (if any). The size and weight of the Block shall be according to the Build Strategy prepared
1. **Hull Outfitting, Piping and Pre-outfitting:** Several outfit items like bollards, hatches, manholes, ladders, anchor pockets, drain plugs, air and sounding pipes are fitted at this stage. Piping as possible may also be fitted. However, modern day shipbuilding demands high level of pre-outfitting, it generally means completion of hot work during the block stage as much as possible as also completion of "cold outfit" as much as practicable. If a high level of pre-outfitting is done at this stage then the delivery can be quicker. Simply speaking any work carried out Block stage within workshop is more cost and time efficient compared to when the same job is done at jetty during the erection. A high level of pre-outfitting is achieved through early preparation of 3-D model using advanced level of information on equipment foundations from respective vendors, outfit items, piping, details of cable trays
 2. **Block Erection:** Transporting blocks to the building dock/slipway and joining them to form the main hull structure. In this phase the complete Hull form is achieved. Accommodation block either as a complete block (depending on weight) or as decks are erected. All systems within the Hull and Accommodation are completed to large extent.
 3. **Hull Completion & Launching:** All blocks joined, final required dimensions of vessel is achieved, hull tested and underwater hull fully painted as per approved paint scheme, then launched into water using one of the launching methods described later in this document. All Non-destructive testing (NDT) of welding are done, underwater work completed which includes Propulsion train and Rudders, Bilge keel, EM Log, Sonar probes, drain plugs, shell markings, sea-chests etc
 4. **Post Launch Work, On-board test and Pre-comm:** This includes further system integration including instrumentation, On-board testing, pre-commissioning of equipment before the ship is ready for Sea trials. Several key vendor send their representative at this stage to assist the shipyard.

5. **Deadweight Survey, Inclining Experiment Sea Trials:** Prior to Sea trials. Survey is done to establish Lightship weight of the ship and Inclining Experiment is carried to assess the Stability of the ship. Subsequently the vessel goes for her maiden voyage for the Sea Trials which may take 3-6 days at sea.
6. **Delivery:** Once Sea Trials comments are addressed, delivery documentation are completed and the vessel is registered and delivered. Owner takes charge of Registration as well bunkering of Fuel and Fresh water.

Work Force:

- In modern day shipbuilding there is hardly any unskilled labour. As all workers have to know safety norms and general awareness, workers like helpers and Garbage cleaners may be termed as semi-skilled workers.
- Skilled manpower includes various trades like structural fitters, welders, gas cutters, CNC machine operators, Shipwrights, grinders, Riggers, Painters, workers for Hull, Machinery, electrical Outfit, Pipe fitters, Machine operators, Crane operators, Skilled workers for Machinery Installation and testing, Wiremen, Electricians, Instrumentation workers, Launching teams, Sea Trials team etc.
- Our Shipyard Template adopts an approach towards Sub-contracted labour through qualified and experienced vendors. The vendors are classed as Hull and Outfit, Blasing & Painting, Piping, HVAC and Accommodation, Machinery Installation and Testing, E&I Vendor, Vessel Shifting and Launching Team,
 - a) **Structural Fitters:** They specialise in joining steel plates and profiles which had been received from CNC Cutting machine and they help to create a proper fit-up of plates and profiles to create initially a sub-assembly, then an assembly and finally a Block. Structural fitters ensure the components of Hull are built as per dimensions as in the drawings. Often they double up as grinders. They also carry out the hydro and pneumatic tests of tanks, testing for doors and hatches, other underwater components. .
 - b) **Gas Cutters:** They usually are on the job to support the structural fitters in localized cutting of plates, profiles, pipes or any other items of steel construction.
 - c) **Welders:** Once the Fit-up had been completed, welders take over the welding according to a series of pre-approved procedures. The welding processes generally adopted are MIG, SAW, TIG or MMAW.
 - d) **Shipwrights:** These skilled craftspeople are involved in the overall assembly and alignment of the hull blocks, they oversee the erection of several blocks to obtain the final hull form, they manage critical alignments and ensure the hull dimensions throughout the Hull is as per drawing with some small tolerances.
 - e) **Riggers:** Workers responsible for handling the heavy lifting and movement of large steel plates and assembled blocks using cranes and specialized equipment during the erection phase.

Launching

Transferring the ship from the slipway/ floating dock/graving dock to the water is called launching.

A ship launching process involves moving a newly built vessel from the shipyard into the water using methods like **Gravity Launching** (sliding down greased slipways), **Float-out** (flooding a dry dock), **Airbag Launching** (using inflatable bags), or **Mechanical Launching**, each requiring careful calculations, safety checks, and coordination

for structural integrity and stability as the ship transitions from land to buoyancy. The most common are longitudinal (end-on) or side launches, with the choice depending on shipyard space and water depth availability.

Common Launching Methods

1. Gravitational Launch (End-On or Side Launch):

- **Process:** The ship slides down an inclined slipway, often stern-first (end-on) or sideways, using gravity.
- **Slipways:** Can be oiled (greased) or use steel rollers for smoother movement.
- **Longitudinal:** Slides stern-first down a ramp, common for cargo ships.
- **Side Launch:** Ship enters water broadside, used when water is too narrow for end-on.

2. Float-Out:

- **Process:** Ship is built in a dry dock (graving or Floating Dock), which is then flooded, allowing the vessel to float out.
- **Use:** Ideal for small vessels to very large vessels, as it's safer and minimizes hull stress.

3. Airbag Launching:

- **Process:** Cylindrical airbags are placed under the hull, inflated to lift and roll the ship into the water.
- **Benefits:** Versatile, cost-effective, and reduces environmental impact.
- **Use:** Typically for smaller vessels or flat bottom vessels.

Plant and Machinery

During the discussion with the Promoters and Information received from the company, it has been noted that the below listed plant and Machinery will be installed/ upgraded/ modernised/ refurbished as part of the proposed Shipyard Project –

S. No.	Description	Quantity
A	Imported Plant & Machinery	
1	CNC Cutting machine (Laser)	1
2	Production Portable Machines (Plasma machine 380V, Welding, cuttings, bevel cutting)	2
3	SAW Machines Trolley type, 380V Type:GWA5018	2
4	Others Tools (Hydraulic Jack, Chain Pulley block and others)	1
5	5 Axis CNC Pipe profile cutting Machine, DN300MM IN DIA, LENGTH MAX 12M	1
6	Hydraulic plate bending machine 3 rollers,	1
7	Hydraulic plate bending machine 3 rollers, W11s-50x2500,381V Type : Upper-Roll Universal	1

S. No.	Description	Quantity
8	Hydraulic plate bending machine 4 rollers, W12-20x2500,380V Upper Roll	1
9	Hydraulic plate bending machine 4 rollers, W12-50x2500,380V Model: W12-50 x 2500	1
10	CNC pipe bending machine DN10,15,20,25,32,40,50; 380V Max. Carbon Steel Pipe Bending Capacity: Φ 76×5t (mm)	1
11	CNC pipe bending machine DN65,80,100; 380V Max. Carbon Steel Pipe Bending Capacity: Φ 130×8t (mm)	1
12	CNC pipe bending machine DN125,150,175,200; 380V Max. Carbon Steel Pipe Bending Capacity: Φ 219×16t (mm)	1
13	Pipe flanging machine ≤22mm, 4m, 600T Type: WC67Y- 600T4000	1
14	Pipe flanging machine ≤25mm, 12m, 2000TPipe flanging machine ≤25mm, 12m, 2000T	1
15	Pipe flushing machine 45L/min,380V Type: QCYST	1
16	Hydrotest machine 250Kg Type: 4DSY-25	1
17	Dehumidifier 700-1000 m ³ , 480L/day, 380V Type: HM- 20KB	2
18	Electrical Load Bank (1800kw dry type) resistance type only	1
19	Ventilation Fans 11KW Type: JBT - 52 - 11	1
20	Alignment Jigs 8"	1

S. No.	Description	Quantity
21	Total Station, Level Gauge 1000m Type:RTS112SR10 1. Telescope: 1.1 Field of view: 1"30' 1.2 REsolving power: 3" 1.3 Effective aperture of obejctive: φ50 1.4 Magnifying power: 30x 1.5 Shortest sighting distance: 1m 2. Distance measurement 2.1 Accuracy: ± (2mm+2x10-6D) 2.2 Meassure distance: 1000m	1
22	Lead Box for NDT Source	1
23	Grit Recovery Unit included air compressor, sandblasting machine, gun and hose 1. A unit of 0.2m ³ sandblasting machine 2. 35m long sandblasting hose 3. 2 sandblasting guns 4. 2 sets of protective clothing, 5. A torage tank, 6. A fixed screw-type air compressor	1
24	<i>Ambulance 9 person</i>	1
25	<i>Welding Machine, BX1-500-3A, 380V</i>	50
26	<i>Docking Stool</i>	100
27	<i>Welding Machine, BX1-300F-3A,380V</i>	50
28	<i>Welding Cables 120mm2</i>	2000
29	Cutting Sets (gas) 30m oxygen and dimethylmethane tube and gauge, 100 type burning torch	50
30	Hauling Winch

Technology Provider

Damen Technical Cooperation B.V (DTC)

Damen Technical Cooperation B.V. (DTC) is the arm of Damen Shipyards Group that facilitates building Damen-designed vessels locally in third-party shipyards worldwide. Its core business is the transfer of technology and expertise to local partners, enabling them to build, sell, and maintain Damen quality locally while promoting local industry development and employment. DTC operates under the umbrella of Damen Shipyards Group, which is a global shipbuilding, repair, and services company headquartered in the Netherlands.

On 8th April, 2025 DTC signed a MoU with SPSPL to develop the Square Port shipyard with the aim of building a range of high-quality Damen vessels to meet the needs of the regional market. This agreement represents Damen's third partnership in the Indian subcontinent.

Damen is widely known for its design and construction of ships and ship maintenance, as well as repairs and conversions. The Damen Technical Cooperation programme works with shipyards around the world, supporting them in modernising their facilities and enabling them to build Damen vessels to the highest standards. A broad range of associated maritime services can also be accessed.

This agreement is a significant step in the vision of SPSPL to transform India's maritime landscape through innovative technologies and sustainable methodologies.

Modern Engineering and Projects Limited (MEPL)

Modern Engineering and Projects Ltd. (MEPL) is an Indian BSE-listed company that builds infrastructure projects under contract, primarily focusing on transportation engineering and civil construction for the National Highways Authority of India (NHAI). Incorporated in 1946, the company has a long history, evolving to focus on infrastructure development through methods like Build, Operate and Transfer (BOT) and Hybrid Annuity Mode (HAM). Its mission is to create and maintain infrastructure that supports economic growth and quality of life, with a vision to grow alongside India's developing infrastructure.

SPSPL has appointed MEPL for renovation and infrastructure works proposed in the Square Port Shipyard.

Shoresafe Maritime Consultant Private Limited (SMCPL)

Shoresafe Maritime Consultant Private Limited is a maritime consulting firm based in Mumbai, India, that was incorporated in 2021. The company specializes in naval architecture, marine engineering, structural engineering, and provides services like ship design, retrofitting, sustainable ship recycling, and compliance services for regulations such as EEXI and CII. It was founded by Mr. Prashant Duvey and Mr. Piyush Bhardwaj and has a team of experienced professionals.

SPSPL has appointed SMCPL for the procurement of new machinery proposed in the Square Port Shipyard.

SCPL's Comments/ Observations

Team SCPL observes that technical collaboration of SPSPL with DTC is a strategic move adopted by the new management of SPSPL for modernizing the acquired Square Port shipyard. The collaboration will help SPSPL to ascend the Square Port shipyard facilities to world-class competitive levels providing an advantage to Square Port yard over other yards located in vicinity of 250-300 km radius. Also, for proposed upgradation and modernization, Team SCPL observed that Company has appointed reputed suppliers and service providers available in the domestic market. This will help SPSPL to implement the proposed project in a timely and coordinated manner.

Raw Material

For the construction and repairs of ship vessels, ship grade mild steels are considered as major raw material. Ship grade steel is not defined by a single standard but by adherence to specifications from international maritime classification societies. The steel is tested and approved (certified) by these bodies for specific marine applications to ensure high strength and corrosion resistance. Common certifying bodies include:

- Indian Registry of Shipping (IRS)
- American Bureau of Shipping (ABS)

- Lloyd's Register (LR)
- Det Norske Veritas (DNV)
- Bureau Veritas (BV)
- Nippon Kaiji Kyokai (NK)
- Registro Italiano Navale (RINA)
- China Classification Society (CCS)

Shipbuilding steel is essential for constructing durable and reliable ships. This specialized steel plate is used in the shipbuilding industry to build the ship hull and other critical components.

Known for its excellent tensile strength and toughness, shipbuilding steel, such as EH36, ensures that ships can withstand harsh marine environments. It offers superior corrosion resistance and durability, making it a preferred choice for fabricating vessels. Different types of steel, including stainless steel and various alloys, are used in shipbuilding to achieve the necessary weld quality and yield strength required for safe and efficient maritime operations.

The availability of "ship grade" steel (marine-grade structural steel) is widespread, as it's a common requirement certified by various international maritime classification societies.

Major integrated steel corporations around the world produce and supply steel that is certified for shipbuilding purposes. The leading global producers include:

- China Baowu Group
- Arcelor Mittal - Nippon Steel
- JFE Steel Corporation (Japan), known for pioneering specialized plates
- POSCO Holdings (South Korea)
- Tata Steel (India/Global), which operates internationally and has specific hot-rolled ship plate products
- JSW Steel (India)
- Steel Authority of India Limited (SAIL) (India), a government-owned enterprise
- Voestalpine (Austria), which produces heavy plates for shipbuilding

SCPL's Comments/ Observations

During the management discussion with SPSPL, Team SCPL advised that suppliers for ship grade steel required in Square Port yard operations will be finalized in later stage of proposed upgradation and modernization works of the yard. The Company will procure the material based on the availability, pricing and requirements during full commencement of the port.

Utilities

Power

To meet the power requirement, Square Port yard have an existing express feeder connection of 980 KVA procured from Maharashtra State Electricity Distribution Company Limited (MSEDCL). The connection is procured through three 500 KVA substations located in the yard at separate facilities with a backup generator of 1,000 KVA at site.

In line with proposed upgradation and modernization works of Square Port yard, SPSPL is proposing to increasing the connected load of power up to 1 MW, regarding which Company will apply to MSEB in late phases of project implementation.

Water

To meet the water requirements, Square Port yard have multiple borewells and tanks storage facility at the site. In operations, water is majorly used for cooling and testing purpose.

Sewage Treatment

Square Port yard has two Sewage Treatment Plants of combined designed capacity 100 CMD for the treatment of 37.4 CMD of sewage. Treated effluent shall be recycled 60% for secondary purposes like Toilet Flushing, floor washing, fire frightening, etc and remaining shall be used on land for gardening within premise after confirming above standards. In no case, sewage shall find its way for gardening / outside factory premises. Square Port yard shall operate the Sewage Treatment System at following prescribed standards –

S. N.	Parameters	Standards (mg/l)
1.	Suspended Solids	< 50
2.	BOD 3 days 27°C	< 30
3.	COD	< 100

Source: PCB Approval

Manpower

The manpower required for the project is ascertained at 672 personnel for the proposed project. The illustration of manpower requirements is provided in the exhibit below –

Description	Unit	Value
Manpower Requirement		
General Manager	Nos.	4
Senior Managers	Nos.	16
Middle Management/ Engineers	Nos.	32
Administrative Support	Nos.	20
Supervisors	Nos.	60
Skilled	Nos.	180
Semi-Skilled	Nos.	360
Total Manpower	Nos.	672

Source: SPSPL and SCPL Estimate

The Consultants note that the Company is already operational and there is existing manpower of around 400 personnel already at the site. The manufacturing and assembling of new ships/ boats is already underway as per the order already procured.

However, the Company will require additional manpower as and when the capacity utilisation increases. Considering the same, the Consultants understand that peak manpower requirement for the Project will be around 672 personnel. The same has been considered while undertaking financial analysis for the Project.

Further, it is noted there are ample amount of ITI/ Polytechnic/ Engineering colleges in Maharashtra and additionally there are other Shipyard Companies in the region, from where the Company can recruit the correct manpower required for successfully operating the proposed Project.

Statutory Approvals and Clearances

The list and status of approvals and clearances required/ acquired by SPSPL for operations of Square Port yard is illustrated in exhibit below –

Name of Approval and Clearances	Issuing Authority, Reference Nos., Date of Approval	Remarks
Sale Certificate	Dated 10 th May, 2023 issued by Liquidator of Bharat Defence and Infrastructure Limited	One- Time Clearance
Factory License	Dated 30 th April, 2025 issued by Directorate of Industries, Maharashtra	One- Time Clearance
Waste Management Certificate	Issued by Mumbai Waste Management Limited	Valid till 31 st March, 2026
Pollution NOC	Dated 20 th June, 2025 issued by Maharashtra Pollution Control Board	Valid till 31 st December, 2027
Land Lease Deed Novation Agreement	Dated 29 th July, 2024 signed between SPSPL and Mumbai Maritime Board	Till 17 years
Fire NOC	Maharashtra Fire Services	In Process
Permanent Electricity Connection	MSEDCL	One Time
Environment NOC	MOEF	Received
PF License	Registered with EPFO West Bengal, Registration No. WBPRB2802835000	One time requirement
ESIC Registration	Registered with ESIC, Employer Code ID 41000998590000999	One time registration
Labor License	Labour Ministry	Applied For

Implementation Schedule

The Consultants note that the Company is currently in discussion with various Consultants/ Advisors/ Vendors etc. to finalise the final configuration and to avail the quotation for finalising the overall project cost and schedule for implementation of the Project. Based on the discussions with the Management of the Company, the Consultants have drawn the level zero implementation schedule for the Project and the financial evaluation as presented as part of the report is based on the same. Considering the same, the project will be implemented over a period of 15 months from the date of achieving the financial closure, assumed to be 31st March 2026 and

hence the Project is expected to achieve the commercial operations by end of June 2027 commercial operations from July 2027.

Here it should be noted that SPSPL will continue manufacturing smaller and medium size boats/ ships during this entire period, based on the existing facilities. Additionally, the Company proposes to have 2 floating docks, which will be second hand purchased. These will be brought in from the current location to Dabhol by tug-boats and once these reach Dabhol, these will be commissioned almost immediately, helping the Company to commence the construction of larger boats/ ships almost immediately after being brought to Dabhol, assumed to be December 2026 and June 2027.

An implementation schedule for the proposed project has been exhibited below –

Description	Already Done	FY 2025-26		FY 2026-27				FY 2027-28				FY 2028-29	
		Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2
Land Acquisition													
Financial Closure													
Basic Engineering													
Detailed Engineering													
Preparation of Civil Works													
Building and Civil Works													
Completion of Civil Works													
Ordering Plant and Machinery													
Receipt of Plant and Machinery													
Installation of Plant and Machinery													
Commissioning and Trial Runs													
Commercial Operations													

Source: SPSPL and SCPL Estimates

Considering the above, the COD for the proposed expansion/ modernisation/ upgrade/ renovation/ refurbishment project as proposed by the Company has been considered as June 2027. The same has been considered by the Consultants while undertaking the financial evaluation for the Project.

Site Visit Analysis

Site Visit Photographs

The photographs taken by the consultants during site visit is exhibit below –

Source: Site Visit

Conclusions

The Consultants conclude the following from the discussion in technical assessment chapter –

- Team SCPL understands that Square Port Shipyard has a dedicated land of 182 acres for shipyard operations. The Consultants also noticed that most of the facilities are properly located in the dedicated space with good inter-connectivity with each other, however some requires upgradation/ renovation works for efficient operations.

- Apart from the above mentioned, the Company will also be implementing launching mechanism system project, which is also the part of the Project and is major aspect of the overall capital investment.
- The total constructed area of the Project boundary as on the date of site visit undertaken by the Consultants stand at 7,28,446 Sq. M.
- The Company is in process of appointing Damen Technical Cooperation B.V, Modern Engineering and Projects Limited, Shoresafe Maritime Consultant Private Limited and other leading Companies/ Consultants/ Advisors etc. for assisting in implementation of the proposed Project.
- The raw material required for manufacturing ship/ boats/ barges/ rigs etc. is a niche segment and there are a limited set of international and domestic player manufacturing this grade of raw material. The Company already has existing relation with these players, for procurement of requisite grade of raw material for the proposed expansion Project. Hence there is no perceived risk in terms of procurement of appropriate raw material for the proposed Project.
- To meet the power requirement, Square Port yard have an existing express feeder connection of 980 KVA procured from Maharashtra State Electricity Distribution Company Limited (MSEDCL). The connection is procured through three 500 KVA substations located in the yard at separate facilities with a backup generator of 1,000 KVA at site.
- To meet the water requirements, Square Port yard have multiple borewells and tanks storage facility at the site. In operations, water is majorly used for cooling and testing purpose.
- Square Port yard has two Sewage Treatment Plants of combined designed capacity 100 CMD for the treatment of 37.4 CMD of sewage. Treated effluent shall be recycled 60% for secondary purposes like Toilet Flushing, floor washing, fire frightening, etc and remaining shall be used on land for gardening within premise after confirming above standards.
- The manpower required for the project is ascertained at 672 personnel for the proposed project.
- Considering the same, the project will be implemented over a period of 15 months from the date of achieving the financial closure, assumed to be 31st March 2026 and hence the Project is expected to achieve the completion by end of June 2028 and commercial operations from July 2028.
- Based on the technical assessment and evaluation as undertaken by the Consultants, the proposed expansion/ renovation/ modernisation/ upgrade/ refurbishment Project of existing shipyard of SPSP at Dabhol is a technically viable proposition.

Project Cost

The overall Project cost as estimated at Rs. 624.05 Crores for the proposed project and the same has been summarised in the table below –

All Figures in Rs. Crore	
Project Cost	Amount
Land Acquisition cost & Site Development	0.05
Building & Civil Cost	174.11
Plant and Machinery	345.59
Misc. Fixed Assets	-
Total Hard Cost (A)	519.76
Interest During Construction	26.16
Pre-operative Expenses	26.16
Provision for Contingency	51.98
Total (B)	104.29
Total Project Cost**	624.05

Source: SPSPL and SCPL Estimates

Here it should be noted, that in line with the industry practice, margin money for working capital has been considered as part of the overall Project Cost.

Land and Land Development

The Consultants note that the Company is already in possession of the existing Shipyard. There is minimal land development works required for the proposed expansion Project and the same has been considered as part of the overall Project cost. The land and land development cost as estimated for the Project has been presented in the table below –

S.no	LAND DETAILS	Total Cost
1	LAND COST	0.00
2	SITE DEVELOPMENT COST	0.05
	TOTAL LAND COST & SITE DEVELOPMENT	0.05

Source: SPSPL and SCPL Estimates

Building and Civil Works

The overall building and civil works cost, considering expansion of jetty for additional ship/ boat manufacturing, renovation refurbishment of existing buildings, upgradation of existing infrastructure etc, has been estimated at Rs. 174.11 Crore. The details of building and civil works as estimated has been provided in the exhibit below –

S.No.	Category	Unit	Quantity	Rate (Rs.)	Amount (Rs.)	Freight & Other costs	GST	TOATL AMOUNT (incdg GST)	Amount in Crs

Preliminary and Pre-operative Expenses

The preliminary and pre-operative expense for the project has been estimated at Rs. 26.16 Crores. The preliminary and pre-operative expense includes are as below –

Sr. No.	Particular	Amount (In Crs)
1	Project Report Preparation / DPR/TEV	0.16
2	Detailed Design & Engineering	10.39
3	Legal & Govt. Liaison	0.25
4	Manufacturing Plant Setup Consultancy -	0.00
5	Administrative Setup & Staff Salaries	10.91
6	Insurance During Construction	2.60
7	Initial Training & Capacity Building	0.00
8	Marketing, Launch, Branding	0.00
9	Approvals	0.00
10	Bank Processing Charges	1.85
	Total	26.16

Source: SPSPL and SCPL Estimates

Contingency

Based on the status of the project at the current scenario, the Consultants have considered a contingency of 10.00% on the hardware cost, to take care of any escalation during the course of implementation of the Project and considering the same, the contingency as considered for the Project amounts to Rs. 51.98 Crore.

Interest During Construction

The Consultants have considered the interest rate for Project at 10.00% and considering the same and duration of implementation of the Project for 16 months, the interest during construction period for the Project has been estimated at Rs. 26016 Crore. The IDC for the project has been capitalised in line with the best practices.

Margin Money for Working Capital

Since the Company is already operational, the Consultants have not considered any margin money for working capital for the Project.

Means of Finance

The proposed project of SPSPL is expected to be funded in a debt equity ratio (DER) of 3:1. The means of finance for the project as proposed is presented in the exhibit below

All Figures in Rs. Crore				
Means of Finance	Amount	% Contribution of Balance Project Cost (Net of subsidy)	% Contribution of Total Project cost	DER
Promoter's contribution	123.53	25.00%	19.80%	
Equity Share Capital/USL	10.00			
Unsecured Loans	113.53			
Debt	370.59	75.00%	59.39%	3.00
- Term Loan	370.59			
Capital Subsidy	129.93		20.82%	
Total	624.05			

Source: SCPL Estimates

Source of Equity/ Promoters Contribution

Based on the discussions with the Management of SPSPL, it is understood that the promoter's contribution for the Project will be brought in form of funds infusion to create the infrastructure for the Project. The source of equity/ promoter's contribution will be the internal accruals of the main holding company and any shortfall will be brought in by the Promoters from own sources of funds.

Term Loan

Considering a term loan of Rs. 370.59 Crores, the Company shall approach Banks / Financial Institutions to cover the debt component required in setting up the proposed project. The broad covenants of the term loan as proposed include –

Description	Details
Amount of Term Loan	Rs. 370.59 Crore
Interest Rate	10.00% per annum
Financial Closure	31 st March 2026
Door to Door Period	12 Years
Construction Period	16 Months from Financial Closure
Commercial Operations Date	30 th June 2027
Post Construction Moratorium Period	9 Months
Total Moratorium	24 Months
First Disbursal Down	March 2026
Last Disbursal Down	June 2027
Repayment Commences	April 2028
Instalments	120 Accelerated Monthly Instalments
Last Instalment	March 2038

Source: SCPL Assumptions

Source: SCPL Analysis

Based on the review of the financial analysis undertaken by the Consultants, the following is observed –

1. The overall project cost for upgrade/ renovation/ modernisation and new installation at SPSPL's Dabhol shipyard has been estimated at Rs. 624.05 Crore, which is proposed to be funded in a debt equity ratio of 3:1, meaning Promoters Contribution of Rs. 123.53 Crores and Term Loan from Lenders to the tune of Rs. 370.59 Crore and considering subsidy receipt of Rs. 124.93 Crore.
2. The interest rate on term loan has been considered at 10.00% and the duration for term loan has been considered at 12 years.
3. The return on capital (ROCE) for the project has been estimated at 16.67%, while the internal rate of return (IRR) has been estimated at 36.87%, both being higher than weighted average post tax cost of capital (WACC) at 7.66%, indicating the Project is financially viable.
4. The net present value (NPV) of the project has been estimated at Rs. 1,045.11 Crore, which also indicates that the Project is financially viable.
5. Meanwhile the average DSCR of the Project has been ascertained at 4.18 and minimum DSCR has been ascertained at 2.56, both parameters indicating the project has fair repayment capacity.
6. Based on the market assessment, technical evaluation, SWOT analysis, risk analysis and mitigation measure and the financial evaluation as carried out by the Consultants, the proposed expansion/ upgrade/ modernisation/ refurbishment Project of SPSPL is found to be feasible proposition.
